Gel reparador de uñas
Con Ácido Hialurónico Hidrolizado

C.I.838260
Ref.: PC LAPIZ GEL REPAR

C1838557
Ref.: PCEXPGLRU

Protection and strengthening of the nails

NEW Nail repair gel

With hydrolysed and cationic hyaluronic acid.
Strengtheners and repairers of brittle nails

Hyaluronic acid is one of the most well-known and sought-after anti-ageing ingredients in the world of beauty. Its low molecular weight allows it to penetrate further into the skin, helping to repair and regenerate skin cells. It also offers antioxidant properties and increases deep moisturisation.

The repair gel also contains hyaluronic cationic acid in its formula, which is absorbed 17 times better than regular hyaluronic acid, significantly increasing the repairing effects on the nails, **restoring their natural appearance, increasing their flexibility and reducing the risk of breakage.**

A bioactive treatment

Potent restructuring, restorative and film-forming properties

The formula also contains a powerful bioactive with an amino acid composition similar to keratin. This bioactive repairs and strengthens the affected surface, creating a hygroscopic film that increases moisture content. Its proteins act on the nail surface, protecting it from external aggressions and adding elasticity.

Protection and strengthening of the nails
