Elastic supports designed to accommodate movement during recovery.

activo

Elastic supports designed to accommodate movement during the recovery/functional rehabilitation process following muscle, tendon, ligament and bone injuries.

Being active
*is an important
part of recovery.*

Aqativo integrates two lines of elastic supports with two complementary therapeutic approaches.

Each range supports different levels of movement, aligning with the natural progression of the injury.

activo
skin
+comfort

*Gentle support
for everyday activities*

Soft, comfortable compression, designed to help you stay naturally active during recovery.

activo
sport
+support

*Intensive support
for those who need it.*

Active compression, designed to support athletic movement during recovery.

aqtivo skin

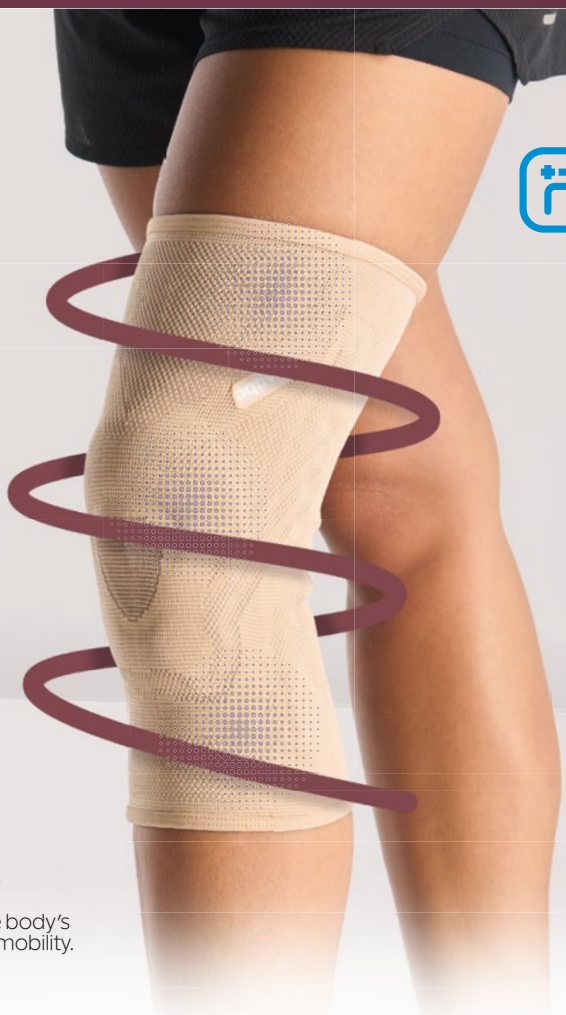

Comfortable movement

during recovery

The Aqtivo Skin range features SkinTech3D technology, with strategic compression zones that provide gentle, secure support for everyday activities.

It helps control movement and supports the body's natural recovery process without restricting mobility.

**Selective
compression**

Areas with varying degrees of compression to activate the muscles and support the joints.

**Improved
blood
circulation**

Optimal oxygen supply to promote tissue recovery.

**Proprioceptive
stimulation**

Greater body awareness and improved movement control during rehabilitation.

**All-round
comfort**

Soft, skin-friendly elasticity that gently wraps around the body.

Tejido
AirQuick

Quickly absorbs and wicks moisture away from the skin for maximum breathability.

You are Aqtivo.

Don't let your recovery stop you.

P701BG

Elastic stabilizing knee support

Indications: Stabilisation and compression after minor knee injuries. Mild osteoarthritis and arthritis of the knee, minor injury and instability, mild sprains, joint effusion and inflammation, postoperative inflammatory conditions, recurrent joint effusion, tendency to instability. Preventative during sports and work activities. Proprioceptive stimulation.

You are Activo.

Don't let your recovery stop you.

Integrated non-slip system

Keeps the support in place during movement.

Stabilising splints on both sides

Guide the joint's natural movement for improved medial-lateral control.

Popliteal pressure-relief panel

A lighter section that optimises comfort during movement and increases tolerance during prolonged use.

aqativo

skin

Anatomical, seamless design

A more secure fit and increased freedom of movement.

3angle² patellar pad

Wraps anatomically around the kneecap, providing stability and helping to maintain its alignment during movement. Its 2 integrated pressure points, situated on either side of the patellar tendon, provide greater support for the kneecap and help relieve pressure in the area.

P706BG

Elastic stabilizing ankle support and figure-of-eight strapping

Indications: Stabilisation and compression after minor ankle injuries. Mild osteoarthritis and arthritis of the ankle. Minor joint instability, bruising, sprains and effusions. Postoperative and post-traumatic weakness. Ligament weakness. Minor injuries. Preventative during sports and work activities. Proprioceptive stimulation.

You are Activo.

Don't let your recovery stop you.

skin

Anatomical, seamless design

A more secure fit and increased freedom of movement.

Anatomically shaped silicone padding

Helps disperse tension and reduce stress on the ankle by providing stabilisation. Protects against tendon overload and minimises the risk of injury.

Functional figure-of-eight strapping

Enables selective immobilisation and provides stability under high loads.

Instep pressure-relief panel

A lighter section that optimises comfort during movement and increases tolerance during prolonged use.
