Don't let your recovery stop you

Elastic supports designed to accommodate movement during recovery.

aqtivo

Elastic supports designed to accommodate movement during the recovery/functional rehabilitation process following muscle, tendon, ligament and bone injuries.

Being active
*is an important
part of recovery.*

Aqtivo integrates two lines of elastic supports with two complementary therapeutic approaches.

Each range supports different levels of movement, aligning with the natural progression of the injury.

aqtivo
skin
+comfort

*Gentle support
for everyday activities*

Soft, comfortable compression, designed to help you stay naturally active during recovery.

aqtivo
sport
+support

*Intensive support
for those who need it.*

Active compression, designed to support athletic movement during recovery.

aqativo sport

Active movement during recovery

Aqativo Sport features SkinTech3D+ technology, the latest evolution of its design, offering **more precise and optimised zonal compression**.

It provides dynamic support, improves movement control during sport and promotes active recovery without restricting mobility.

Selective compression

Areas with varying degrees of compression to protect muscles and joints from strain.

Reduced muscle vibrations

Less muscle fatigue and improved functional stability.

Improved blood circulation

Optimal oxygen supply to promote tissue recovery.

Advanced proprioceptive stimulation

Greater body awareness and improved movement control during rehabilitation.

All-round comfort

Soft, skin-friendly elasticity that gently wraps around the body.

Quickly absorbs and wicks moisture away from the skin for maximum breathability.

You are Aqativo.

P701

Elastic stabilizing knee support

Indications: Stabilisation and compression after minor knee injuries. Mild osteoarthritis and arthritis of the knee, minor injury and instability, mild sprains, joint effusion and inflammation, postoperative inflammatory conditions, recurrent joint effusion, tendency to instability. Preventative during sports and work activities. Proprioceptive stimulation.

You are Activo.

Don't let your recovery stop you

activo sport

Integrated non-slip system

Keeps the support in place during movement.

Stabilising splints on both sides

Guide the joint's natural movement for improved medial-lateral control.

Popliteal pressure-relief panel

A lighter section that optimises comfort during movement and increases tolerance during prolonged use.

Anatomical, seamless design

A more secure fit and increased freedom of movement.

3angle² patellar pad

Wraps anatomically around the kneecap, providing stability and helping to maintain its alignment during movement. Its 2 integrated pressure points, situated on either side of the patellar tendon, provide greater support for the kneecap and help relieve pressure in the area.

A more secure fit and increased freedom of movement.

Instep pressure-relief panel

A lighter section that optimises comfort during movement and increases tolerance during prolonged use.

Functional figure-of-eight strapping

Enables selective immobilisation and provides stability under high loads.

Anatomically shaped silicone padding

Helps disperse tension and reduce stress on the ankle by providing stabilisation. Protects against tendon overload and minimises the risk of injury.
