PRIM

+ than 150 years of history

PRIM Group is a benchmark company in the Spanish market

- pharmacy
- orthopaedics
- orthopaedic establishments
- podiatry
- physiotherapy and rehabilitation
- medical technology

listed on the stock market

since 1985

€252 M

+950 professionals

Thanks to our work in these sectors, the company has succeeded in positioning itself as a leader and benchmark for technology and innovation in the healthcare market

5 in-house factories + 3 bespoke manufacturing workshops

Factories in Toledo, Madrid, Barcelona, Valencia and Florence to produce and supply medical, orthopaedic and parapharmaceutical goods.
Workshops for bespoke manufacturing (prosthetics and orthotics) located in A Coruña, Madrid and Valencia.

31 orthopaedic establishments

Highly qualified

*Data published in the CNMV - Non-Financial Information Statements
Date of data: 31/12/2025

innovation

We anticipate the needs of the market with the development of new products, innovating models and materials

1000+ items

Your one-stop supplier of orthotics, podiatry, healthcare, technical aid and parapharmacy products

4 new companies

(Herbitas, Teyder, EasyTech, Ortoprono)

Acquired in 2022-2023

global company

We export our own products and search for new products for the local market across all five continents

leaders in quality

Our products meet accepted manufacturing standards, ensuring consistent quality

10 regional offices

We have a well-established commercial structure with our own network to provide a professional and individualised response to market needs

personalised customer service

We listen to your needs to support your existing business today and identify new opportunities for it in the future

PRIM 150 years at the service of the health sector

PRIM has been offering tailor-made solutions to meet the needs of our customers for **more than 150 years**; it is a leading Spanish company in **the personal mobility and health care** market.

PRIM specialises in designing, manufacturing, and marketing orthotics, prosthetics, podiatry products, technical aids, over-the-counter items, physiotherapy, rehabilitation, and sports medicine products, as well as integrated equipment.

PRIM sells its products in 98 countries around the world and has its own workshops to produce custom-made prostheses and orthoses.

At PRIM
we improve people's lives by leading healthcare innovation.

airtex PRO

STABILIZING ORTHOSIS FOR KNEE AND ANKLE

feel alive
100% active

New Airtex
Knee and ankle orthoses that provide dynamic joint stability, helping to improve treatment and ensure a fast and safe recovery.

Maximum adaptability, breathability, lightness and comfort for the joint.

Comfortable stability: they adapt to the dynamics of your movement.

flex eco sense

three-layer fabric.
lightweight and flexible
Latest-generation, semi-elastic fabric, flexible and lightweight, with **high compressive properties and an increased capacity to recover its shape that enables it to adapt naturally to the joint.**

100%
active breathability
Its fabrics are designed to ensure adequate ventilation by actively helping to remove heat and sweat. Your skin feels healthy, fresh and comfortable.

Always at the avant-garde
for a unique user experience

PRODUCT LINES

Dynamic textile knee supports airtexPRO

airtexPRO

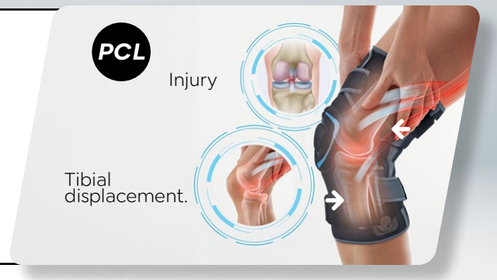
A revolutionary system

AirtexPRO can be adapted to any injury, thanks to its revolutionary **versatile adjustment** system: a combination of buckles, pins and straps that can be selectively positioned in order to provide personalised treatment in line with the specific stabilisation needs of each patient.

One orthosis, four applications

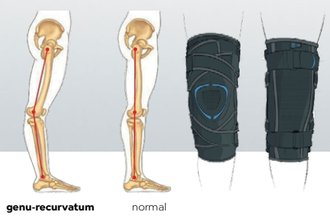
Forward femoral traction and backward tibial traction: **ACL injury.**

Backward femoral traction and forward tibial traction: **PCL injury.**

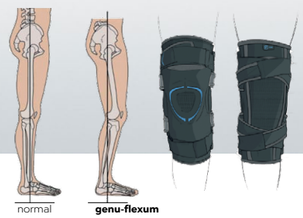


System incorporated into product references ATX721 and ATX730.

This unique system also allows the orthosis to be personalised for the treatment of minor hyperextension injuries or mild pathological flexion.



Backward femoral and tibial traction: mild **genu-recurvatum**



Forward femoral and tibial traction: **genu-flexum**

AIRTEX · KNEE SUPPORT WITH ROM JOINT

Ref.: ATX730

Characteristics

- Knee stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- Two dynamic ROM joints follow the anatomical movement of the knee when walking and limit its range of motion, allowing for controlled flexion-extension in an adjustable range, with hyperextension locking at 0°, 30°, 55°, 75°, 95°, 110° of flexion and 15° or 75° of extension.
- The flexion and extension angles are set using special Allen keys and fixed so that they cannot be manipulated by the patient.
- Cushioned, anatomically triangular-shaped patellar pad that helps maintain the kneecap's stability and alignment during movement.
- Versatile adjustment system that allows the orthosis to be shaped to suit the specific needs of each patient.
- Mesh fabric to protect the kneecap and popliteal fossa: enhances comfort and improves gait dynamics.
- Mesh-covered upper opening to aid placement and adaptation to different body shapes.
- Fitting aids.
- Includes a kit with two replacement pins and one Allen key, specially designed to enable fast and easy adaptation of the joint.
- Bilateral.

Indications

Control of knee mobility. Post-surgical treatment of the knee, anteroposterior and mediolateral knee instability, anterior cruciate ligament (ACL) and posterior cruciate ligament (PCL) injury. Post-injury and post-surgical rehabilitation

AIRTEX · KNEE SUPPORT WITH POLYCENTRIC JOINT

Ref.: ATX721

Characteristics

- Knee stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- Two polycentric joints inserted on both sides reinforce the mediolateral stability of the knee by facilitating physiological flexion and extension.
- Cushioned, anatomically triangular-shaped patellar pad that helps maintain the kneecap's stability and alignment during movement.
- Versatile adjustment system that allows the orthosis to be shaped to suit the specific needs of each patient.
- Mesh fabric to protect the kneecap and popliteal fossa: enhances comfort and improves gait dynamics.
- Mesh-covered upper opening to aid placement and adaptation to different body shapes.
- Fitting aids.
- Bilateral.

Indications
Treatment of joint pain, bursitis, tendinitis, arthritis and osteoarthritis, patellar injuries, lateral knee ligament injuries, Osgood-Schlatter disease, chondromalacia patella, patellar subluxation, post-injury and post-surgical treatment. Varus-valgus control. Patellofemoral or lateral ligament instability; ACL, PCL, meniscus and lateral ligament injuries; and combined injuries.

AIRTEX · WRAPAROUND KNEE SUPPORT WITH POLYCENTRIC JOINT

Ref.: ATX720

Characteristics

- Knee stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- Two polycentric joints inserted on both sides reinforce the mediolateral stability of the knee by facilitating physiological flexion and extension.
- Cushioned, anatomically triangular-shaped patellar pad that helps maintain the kneecap's stability and alignment during movement.
- The kneecap is protected by the fine mesh fabric that wraps around it and improves comfort.
- Double band wrap-around closure for easy adjustment during the inflammatory process.
- Designed with an opening over the popliteal fossa.
- With a hypoallergenic non-slip system to stop the support from rotating or slipping.
- Bilateral.

Indications

Suitable for the treatment of joint pain, bursitis, tendinitis, arthritis and osteoarthritis, patellar injuries, lateral knee ligament injuries, Osgood-Schlatter disease, chondromalacia patella, patellar subluxation and patellofemoral or lateral ligament instability. Varus-valgus control. Post-injury and post-surgical treatment.

AIRTEX · KNEE SUPPORT WITH SPLINTS AND STRAPS

Ref.: ATX710

Characteristics

- Knee stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- Two flexible lateral stabilisers on each side guide the physiological curvature of the knee, providing mediolateral support to the joint without limiting flexion-extension.
- Cushioned, anatomically triangular-shaped patellar pad that helps maintain the kneecap's stability and alignment during movement.
- Double-inverted adjustment system that enhances joint control and helps to fix the position of the knee, providing better anteroposterior and mediolateral stability.
- Mesh fabric to protect the kneecap and popliteal fossa: enhances comfort and improves gait dynamics.
- Fitting aids.
- Bilateral.

Indications

Suitable for the treatment of joint pain, bursitis, tendinitis, patellar injuries, lateral knee ligament injuries, Osgood-Schlatter disease, knee subluxation, chondromalacia patella, strains and sprains and patellar subluxation.

Dynamic textile ankle supports airtex PRO

AIRTEX · ANKLE SUPPORT WITH SPLINT AND STRAPS

Ref.: ATX830

Characteristics

- Ankle stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- One anatomical splint provides mediolateral stabilisation and positions the tibiotarsal joint in pronation.
- The band attached to the splint counteracts supination movements and further promotes pronation.
- The non-elastic rear strap locks the valves and fixes the orthosis in place.
- The full front opening, both at the tibia and instep, combined with the 2 tibial fastenings, make it easier to position and fit the orthosis correctly.
- Adjustable compression: reduced in the instep area and sole for improved comfort. Unrestricted heel.
- Left and right sides

Indications

Post-surgical rehabilitation following immobilisation; post-injury positioning; second-degree sprains.

AIRTEX · ANKLE SUPPORT WITH STABILISERS AND FIGURE-OF-EIGHT STRAPPING

Ref.: ATX820

Characteristics

- Ankle stabilising orthosis made from 100% breathable technical FlexEcoSense three-layer elastic-compressive fabric made from recycled fibres that adapts naturally to the joint.
- 2 removable, ergonomically shaped lateral stabilisers adapt comfortably to the shape of the ankle, limiting the mediolateral mobility of the tibiotarsal joint and supporting the healing process.
- Adaptable: the stabilisers can be removed as the rehabilitation process progresses.
- The elastic strap enables figure-of-eight strapping to improve stabilisation.
- Front opening with 3 tibial fastenings to facilitate the placement and fitting of the orthosis.
- Adjustable compression: reduced in the instep area and sole for improved comfort. Unrestricted heel.
- Bilateral

Indications

Suitable for the treatment of mild and moderate ankle sprain, ankle tendinitis and injury, bruising, joint effusion, chronic irritation, post-surgical treatment, osteoarthritis, ankle arthritis and instability.

AIRTEX · LONG KNEE SUPPORT onesize

Ref.: ATXOS700

Characteristics

- Stabilising knee support developed with FST bonding technology to eliminate skin-to-seam contact: prevents chafing and enhances comfort.
- Made of 100% breathable, lightweight, comfortable and easily adaptable three-layer fabric to support the joint.
- With 4 lateral spiral stabilisers (2 on each side) to aid mediolateral knee control while allowing flexion movement.
- Cushioned, anatomically triangular-shaped patellar pad that helps maintain the kneecap's stability during use.
- Two velcro fasteners allow personalised adjustment and compression control at each stage of treatment.
- Popliteal opening for greater comfort.
- Hypoallergenic non-slip system to stop the support from rotating or slipping.
- Bilateral.

Indications
Minor instability of collateral ligaments, patellofemoral instability, congenital or acquired instabilities. Joint pain and inflammation associated with osteoarthritis, arthritis and tendonitis. Post-surgical knee treatment, rehabilitation processes.

AIRTEX · PATELLAR STRAP onesize

Ref.: ATXOS705

Characteristics

- Infrapatellar strap developed with FST bonding technology to eliminate skin-to-seam contact: prevents chafing and enhances comfort.
- Made of 100% breathable, lightweight, comfortable and highly adaptable three-layer fabric.
- Interior with PVC core to provide consistency and improve knee stability.
- Symmetrical design for comfort and fit.
- Anatomical silicone pad that exerts pressure on the patellar tendon to relieve pain.
- Double-buckle system to keep the strap in place.
- Easy adjustment with 2 velcro closure straps.
- Bilateral.

Indications
Osgood-Schlatter disease, chondromalacia patella, patellar tendon tendinitis, sporting activities involving forced extension of the knee.

Ref.: ATXOS205

Characteristics

- Epicondylitis strap developed with FST bonding technology to eliminate skin-to-seam contact: prevents chafing and enhances comfort.
- Made of 100% breathable, lightweight, comfortable and highly adaptable three-layer fabric.
- Interior with PVC core to provide consistency and improve stability.
- Symmetrical design allows use for both epicondylitis and epitrochleitis, improving comfort and providing an enhanced feeling of support.
- Repositionable silicon anatomical pad that exerts pressure on the epicondyle to relieve pain.
- Easy adjustment with velcro closure strap.
- Double-buckle system to keep the strap in place.
- Bilateral.

Indications
Treatment of epicondylitis (tennis elbow) or epitrochleitis (golfer's elbow).

AIRTEX · WRIST AND THUMB SUPPORT onesize

Ref.: ATX0S100

Characteristics

- Wrist and thumb support developed with FST bonding technology to eliminate skin-to-seam contact: prevents chafing and enhances comfort.
- Made of 100% breathable, lightweight, comfortable and easily adaptable three-layer fabric to support the joint.
- Wrap-around design to stabilise the trapeziometacarpal joint and wrist, maintaining thumb abduction and hand functionality.
- Velcro closure straps that allow personalised adjustment and compression control at each stage of treatment.
- Bilateral.

Indications
Post-traumatic joint synovitis of the radius after cast immobilisation treatment, thumb arthrosis, arthritis, rhizarthrosis, carpal tunnel syndrome, tendonitis.

ELASTIC ORTHOSIS

Elastic orthosis designed to accommodate movement during the recovery/functional rehabilitation process following muscle, tendon, ligament and bone injuries.

+support

Intensive support for those who need it.

Active compression, designed to support athletic movement during recovery.

You are Aqtivo. *Don't let your recovery stop you*

SKIN TECH 3D+

Active movement *during recovery*

Aqtivo Sport features SkinTech3D+ technology, the latest evolution of its design, **offering more precise and optimised zonal compression.**

It provides dynamic support, improves movement control during sport and promotes active recovery without restricting mobility.

Fabric Air Quick

Quickly absorbs and wicks moisture away from the skin for maximum breathability.

Selective compression	***Reduced muscle vibrations***	***Improved blood circulation***	***Advanced proprioceptive stimulation***	***All-round comfort***
Areas with varying degrees of compression to protect muscles and joints from strain.	Less muscle fatigue and improved functional stability.	Optimal oxygen supply to promote tissue recovery.	Greater body awareness and improved movement control during rehabilitation.	Soft, skin-friendly elasticity that gently wraps around the body

Elastic orthosis aqtivo sport

AQTIVO SPORT · ELASTIC STABILIZING KNEE SUPPORT

Ref.: P701

Characteristics

- Elastic knee support made from stretch fabric featuring *SkinTech3D+* technology, with strategic compression zones that provide gentle support, promote blood circulation and improve proprioception.
- Its *AirQuick* fabric absorbs and wicks moisture away from the skin for maximum breathability.
- Its exclusive 3angle[2] patellar pad wraps around the kneecap anatomically, providing stability and helping to maintain its alignment during movement. Its 2 integrated pressure points, situated on either side of the patellar tendon, provide greater support for the kneecap and help relieve pressure in the area.
- A built-in anti-slip system keeps the orthosis in place during movement.
- The popliteal pressure-relief panel is designed with a lighter section that optimises comfort during movement and increases tolerance during prolonged use.
- Anatomically shaped and seamless for a more secure fit and greater freedom of movement.
- Fits left or right side.

Indications

Stabilisation and compression after minor knee injuries. Mild osteoarthritis and arthritis of the knee, minor injury and instability, mild sprains, joint effusion and inflammation, postoperative inflammatory conditions, recurrent joint effusion, tendency to instability. Preventative during sports and work activities. Proprioceptive stimulation.

AQTIVO SPORT · ELASTIC STABILIZING ANKLE SUPPORT AND FIGURE-OF-EIGHT STRAPPING

Ref.: P706

Characteristics

- Elastic ankle support made from stretch fabric featuring *SkinTech3D+* technology, with strategic compression zones that provide gentle support, promote blood circulation and improve proprioception.
- Its *AirQuick* fabric absorbs and wicks moisture away from the skin for maximum breathability.
- Features anatomical silicone padding that helps disperse pressure and reduce stress on the malleoli, providing stabilisation. Protects against tendon overload and minimises the risk of injury.
- Functional figure-of-eight strapping allows for selective immobilisation and provides stability under high loads.
- The instep pressure-relief panel is designed with a lighter section that optimises comfort during movement and increases tolerance during prolonged use.
- Anatomically shaped and seamless for a more secure fit and greater freedom of movement.
- Fits left or right side.

Indications
Stabilisation and compression after minor ankle injuries. Mild osteoarthritis and arthritis of the ankle. Minor joint instability, bruising, sprains and effusions. Postoperative and post-traumatic weakness. Ligament weakness. Minor injuries. Preventative during sports and work activities. Proprioceptive stimulation.

AQTIVO SPORT · ELASTIC ELBOW SUPPORT

Ref.: P707

Characteristics

- Elastic elbow support made from stretch fabric featuring *SkinTech3D+* technology, with strategic compression zones that provide gentle support, promote blood circulation and improve proprioception.
- Its *AirQuick* fabric absorbs and wicks moisture away from the skin for maximum breathability.
- Features anatomical silicone padding that helps disperse pressure on the epicondyle/epitrochlea, eliminating tension and relieving pain.
- An adjustable compression strap selectively reinforces pressure at the point of pain, enhancing pain relief. Removable.
- The anterior pressure-relief panel is designed with a lighter section that optimises comfort during movement and increases tolerance during prolonged use.
- Anatomically shaped and seamless for a more secure fit and greater freedom of movement.
- Fits left or right side.

Indications
Provides stabilisation and compression to relieve pain and help eliminate tension in the elbow. Lateral and medial epicondylitis. Preventative during sports and work activities. Proprioceptive stimulation.

AQTIVO SPORT · ELASTIC LUMBOSACRAL BACK SUPPORT

Ref.: P606

Characteristics

- Elastic back support belt made from stretch fabric featuring *SkinTech3D+* technology, with strategic compression zones that provide gentle support, promote blood circulation and improve proprioception.
- Its *AirQuick* fabric absorbs and wicks moisture away from the skin for maximum breathability.
- Features 4 lumbar support ribs to provide stability to the lower back, relieving tension in the area.
- With a Velcro fastener that allows for individual adjustment of compression.
- And a hand clasp for easy and convenient fitting.
- Anatomically shaped and seamless for a more secure fit and greater freedom of movement.

Indications

Provides stabilisation and compression to relieve lower back pain, moderate muscle degeneration or insufficiency in the spine, mild lumbago, postpartum conditions and post-operative/post-traumatic conditions of the lower back.

neoprair

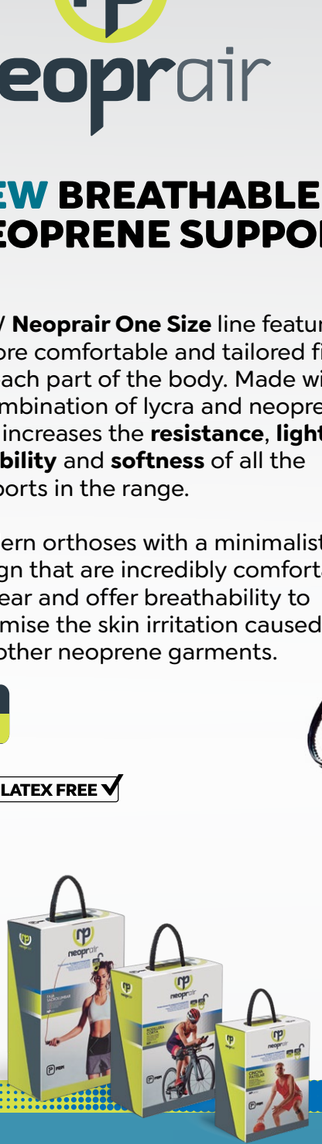
NEW BREATHABLE NEOPRENE SUPPORTS

NEW **Neoprair One Size** line featuring a more comfortable and tailored fit for each part of the body. Made with a combination of lycra and neoprene that increases the **resistance**, **lightness**, **flexibility** and **softness** of all the supports in the range.

Modern orthoses with a minimalist design that are incredibly comfortable to wear and offer breathability to minimise the skin irritation caused by the other neoprene garments.

ONE size

100% LATEX FREE



Heat that protects you, breathability that propels you. you win.

NEW FABRIC

Adaptability and flexibility

The new **Neoprair** fabric, which combines lycra-neoprene-lycra, is lighter and offers more compression and adaptability. It mimics the structure and movement of muscles and joints, enhancing support and stabilisation without restricting mobility and offering more control and security in every movement.

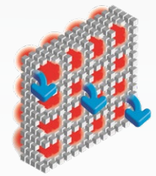
An exclusive neoprene that takes care of you.

AIR LOCK SYSTEM

Thermocompression and breathability

Retains the body's natural heat: The therapeutic heat generated by Neoprair stimulates blood circulation, helping to reduce pain and stiffness in joints and muscles, a key aspect of managing chronic conditions.

Expels sweat: Combined with the breathability offered by its unique core, Neoprair ensures your skin stays dry, reducing the risk of irritation from prolonged use and enhancing comfort.



And protects you.

Prevention of new injuries

In addition to effectively managing chronic injuries, Neoprair's mechanisms also help prevent recurrences by offering additional support for joints that are subjected to stress or repetitive movements.

Neoprene orthosis neoprair ONE size

NEOPRAIR · KNEE SUPPORT

ONE size

Ref.: NPOS136

Characteristics

- Knee orthosis made of neoprene with "AirLock System" technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Made with lateral spiral stabilisers to provide mid-lateral support without limiting knee flexion and extension.
- Includes a patellar pad to help centre and stabilise the kneecap.
- Open in the popliteal area for greater comfort.
- The wrap-around double velcro strap closure facilitates adjustment and allows for personalised compression control. Maintains the position of the orthosis.
- With non-slip inner silicone bands.
- A more modern, functional and aesthetically pleasing design.
- Bilateral.

Indications

Joint pain, bursitis, tendinitis, arthritis, osteoarthritis, patellar injuries, lateral knee ligament injuries, Osgood-Schlatter disease, chondromalacia patella, patellar subluxation, post-injury and post-surgical treatment.

AirLock SYSTEM 100% LATEX FREE

Neoprene orthosis neoprair ONE size

NEOPRAIR · ELBOW SUPPORT

ONE size

Ref.: NPOS173

Characteristics

- Elbow orthosis made of neoprene with "AirLock System" technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Made with two straps that fit to the distal third of the upper arm and the proximal third of the forearm.
- Easy to put on and adjust thanks to the eyelets with tabs included on both straps, that prevent the support from rotating.
- The velcro closure straps facilitate adjustment and allow for personalised compression control.
- Open in the anterior flexure of the arm to maximise comfort.
- A more modern, functional and aesthetically pleasing design.
- Bilateral.

Indications

Epicondylitis, epitrochleitis and mild post-traumatic elbow injuries.

CODE	RANGE (cm)
736411	22 - 33

AirLock SYSTEM 100% LATEX FREE

NEOPRAIR · EPICONDYLITIS STRAP

ON size

Ref.: NPOS172

Characteristics

- Elbow orthosis made of neoprene with "AirLock System" technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Equipped with a silicone pad that relieves the condylar tendon, helping to eliminate pain.
- The velcro closure strap facilitates adjustment and allows for personalised compression control.
- With non-slip inner silicone bands.
- A more modern, functional and aesthetically pleasing design.
- Bilateral.

Indications

Treatment of sport or work-related lateral epicondylitis (tennis elbow) or medial epicondylitis (golfer's elbow).

CODE	RANGE (cm)

NEOPRAIR · WRAP-AROUND WRIST SUPPORT WITH THUMB

ONE size

Ref.: NPOS165

Characteristics

- Wrist orthosis made of neoprene with "AirLock System" technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Surrounds and protects the wrist and trapeziometacarpal joint while maintaining the functionality of the hand.
- Reduces the instability of the thumb, keeping it in abduction.
- The velcro closure strap facilitates adjustment and allows for personalised compression control.
- A more modern, functional and aesthetically pleasing design.
- Bilateral.

Indications

Rhizarthrosis, arthritis, tendinitis, bursitis, sprains and minor injuries.

CODE	RANGE (cm)

AirLock SYSTEM 100% LATEX FREE

Neoprene orthosis neoprair ONE size

NEOPRAIR · WRAP-AROUND WRIST SUPPORT

ONE size

Ref.: NPOS167

Characteristics

- Wrist orthosis made of neoprene with "AirLock System" technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort without irritation. A lightweight and flexible Lycra fabric surrounds the neoprene core, providing a combination that ergonomically adjusts to the user's anatomy, improving compression and adaptation.
- Surrounds and protects the carpometacarpal joint while maintaining the functionality of the hand.
- With double velcro fastening points: inner closure to facilitate the securing of the orthosis and outer closure for personalised compression control.
- A more modern, functional and aesthetically pleasing design.
- Bilateral.

Indications

Sprains, tendinitis and physical activity that puts a strain on the wrist joint. Osteoarthritis, arthritis, bursitis and post injury.

PRODUCT LINES

neoprair

NEW BREATHABLE NEOPRENE ORTHOSIS

Complete range in all sizes

NEW **Neoprair** line featuring a more comfortable and tailored fit for each part of the body. Featuring a blend of Lycra, neoprene and polyamide that enhances the **strength**, **lightness**, **flexibility** and **softness** of all the products.

Modern orthoses with a minimalist design that are incredibly comfortable to wear and offer breathability to minimise the skin irritation caused by the other neoprene garments.

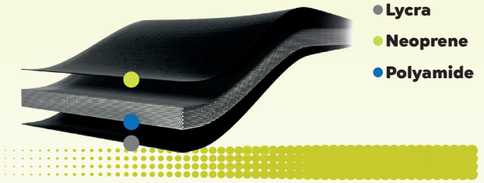
100% LATEX FREE

Heat that protects you, breathability that propels you. **you win.**

NEW FABRIC

Adaptability and flexibility

The new **Neoprair** three-layer Lycra–neoprene–polyamide fabric provides even compression and controlled elasticity, ensuring a comfortable, anatomical fit. Its structure adapts to the anatomy and dynamics of the joint, helping to improve support, stabilisation and proprioception during movement.



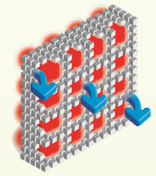
An exclusive neoprene that takes care of you.

AIR LOCK SYSTEM

Thermocompression and breathability

Retains the body's natural heat: The therapeutic heat generated by Neoprair stimulates blood circulation, helping to reduce pain and stiffness in joints and muscles, a key aspect of managing chronic conditions.

Expels sweat: Combined with the breathability offered by its unique core, Neoprair ensures your skin stays dry, reducing the risk of irritation from prolonged use and enhancing comfort.



An exclusive neoprene that protects you.

Prevention of new injuries

In addition to effectively managing chronic injuries, Neoprair's mechanisms also help prevent recurrences by offering additional support for joints that are subjected to stress or repetitive movements.

Neoprene orthosis neoprair

NEOPRAIR · KNEE BRACE WITH POLYCENTRIC JOINTS

Ref.: NP140

Características

- Knee orthosis made in neoprene with “AirLock System” technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- With an anatomical patellar pad that promotes dynamic patellar alignment, providing stability.
- Its polycentric joints support the knee’s natural flexion and extension and improve mediolateral control of the tibiaofemoral joint.
- 2 non-elastic adjustment straps: one at the top of the thigh and one at the calf, providing personalised support and stability.
- Features a soft Lycra panel in the popliteal area for improved fit and comfort.
- With non-slip inner silicone bands.
- A more modern, functional and aesthetically pleasing design.
- Fits left or right side.

Indicaciones
Joint pain, bursitis, tendinitis, osteoartritis, artrosis, patellar injuries, lateral knee ligament injuries, Osgood-Schlatter, chondromalacia patella, patellar subluxation, trauma, postoperative recovery.

Neoprene orthosis neoprair

NEOPRAIR · ANKLE SUPPORT WITH FIGURE-OF-EIGHT STRAPPING

Ref.: NP115

Características

- Ankle orthosis made in neoprene with “AirLock System” technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Incorporates straps arranged in a functional figure-of-eight pattern to improve the ankle’s dynamic stability and proprioception.
- Designed with tibial fastenings for easy adjustment and a secure fit.
- A tab at the back helps with positioning.
- The double-layer Lycra panel in the instep area improves fit and comfort.
- Open heel.
- A more modern, functional and aesthetically pleasing design.
- Fits left or right side.

Indicaciones
Joint pain, mild sprains, preventative during sports.

Neoprene orthosis neoprair

NEOPRAIR · SHOULDER SUPPORT

Ref.: NP174

Características

- Shoulder orthosis made in neoprene with “AirLock System” technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Its wrap-around design provides compression and support to the glenohumeral joint complex, promoting proprioception and functional control of movement.
- Features an secure elastic strap for adjustment of abduction. And an underarm pad that ensures maximum comfort.
- A more modern, functional and aesthetically pleasing design.
- Fits left or right side.

Indicaciones
Painful shoulder syndrome, mild sprains, prevention of sprains during sports practice, tendinitis, and post-traumatic shoulder conditions.

Neoprene orthosis neoprair

NEOPRAIR · LUMBOSACRAL BACK SUPPORT

Ref.: NP156

Características

- Back orthosis made in neoprene with “AirLock System” technology that provides therapeutic heat to the treated area while simultaneously allowing the skin to breathe, offering increased comfort.
- Comprising four paravertebral supports that provide passive stabilisation for the lumbar region.
- A tensioning-band system provides active stabilisation and allows the support to be tailored to the individual. Removable.
- With a whalebone-type frontal stay to add stability and maintain the shape of the orthosis, thereby improving comfort.
- The Velcro closure strap facilitates adjustment and allows for personalised compression control.
- A more modern, functional and aesthetically pleasing design.

Indicaciones
Lumbosciatica, low back pain , spondyloarthorosis, herniated disc, Contusion and muscle pain, joint stiffness, post-operative period and post-traumatic treatmet.

2 PRIM Spine

Corsets · Braces

Corsets

A brace is an orthopaedic device used to rectify the position of the spine in the thoracic lumbar region.
It treats injuries to the spine, muscles, tendons and joints.
The brace will limit medial-lateral mobility, flexion and extension as well as rotation.

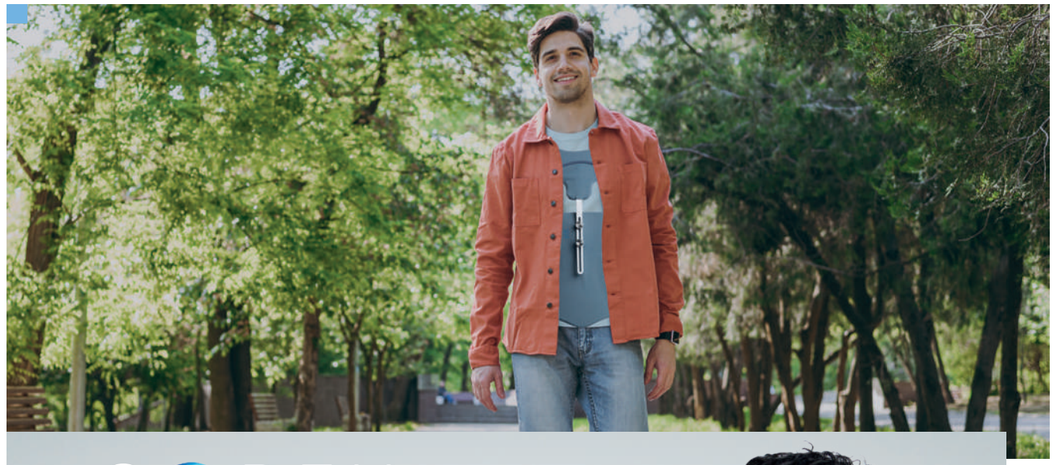
The brace **secures the spine** allowing the patient to maintain a minimum level of activity, which will speed up the rehabilitation process.
It will avoid other secondary problems.

A brace is usually **made of strong, rigid but lightweight materials** such as thermoplastic, with straps to adjust it to the body so that it can be easily put on and taken off

The brace can be **standard fit or custom-made,** depending on the patient's anatomy and injury.

The brace is used to **treat spinal problems** that may be congenital, incorrect positioning, intervertebral disc injuries, hyperkyphosis, hyperlordosis, scoliosis, vertebral fracture or crushing.

Corsets



COREX+

Corex,a bivalve back brace that limits the mobility of the spine in all three planes: flexion-extension, lateral and rotation. Keeps the spine in extension and prevents unwanted twisting to ensure successful treatment.

COREX · TWO SHELLS CORSET TLSO WITH STERNAL SUPPORT

Ref.: TLSOP

Characteristics

- Strong and lightweight brace made of 3 mm high density polyethylene.
- Stretch fabric lining, removable without tools.
- The COREX + TLSOP, limits the mobility of the spine in the three planes (flexoextension, lateral and rotation), keeps the spine in extension, avoids unwanted twisting and ensures treatment.

Indications

Fracture, dorsolumbar vertebral crushing, pre and/or postoperative process, osteoporosis, hyperkyphosis, prevention of spinal canal stenosis, high hyperlordosis. Vertebral fusion, wheelchair seating, painful adult scoliosis, dorsolumbar arthrosis, infectious spondylitis.

Front view **Rear view** **Side view**

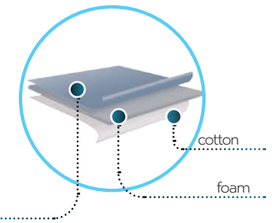
1 Elastic straps. Anatomical adaptation.

2 Chest plate Continuous adjustment.

3 Quick-clip buckles. Secure the position and allow the brace to be opened without having to change the adjustment.

4 Crocodile-type micro-hook fasteners

5 Polyethylane plates Adjustable with a heat gun.



Padded stretch fabric lining.
Tool-less detachment.
Easy to wash.

Hyperextension braces

Hyperextension braces

Rigid orthosis made of anodised duraluminium: keeps the spine in hyperextension, limiting the anterio-posterior, rotational and lateral movement.

General characteristics

1 Side plates, continuously adjustable in height.

2 Sternal plate, continuously adjustable in width.

3 Anatomically sternal cushion.

4 Ergonomic, forward-moving, locking tensioner with ratier circulation system: it fixes the frame, ensuring hyperextension of the spine. It works under an overcentre system: the more you pull the belt, the more secure the closure; it can only be opened by clicking on the blue piece mounted on it.

5 The belt slides inside the buckle, through a triple circulation system, facilitating the adjustment and fixation of the lumbar plate. It allows the usual thoracic nd abdominal movements, such as coughing, sneezing, etc., while preventing the frame from moving from the established position.

6 The blue finger loop functions as a technical aid to facilitate positioning at the anchorage point of the frame.

7 Fixed or tilting abdominal plate (depending on model)

Single tool for quick and easy adjustment.
(except for model C35PB).

Mode of action of hyperextension frames

These braces base their action on theapplication of force at 3 points:1 sternum, 2 pubis and 3 lumbar inducing hyperextension of the lumbar area and limiting medio-lateral, anteroposterior and rotational movements. They unload the anterior face of the vertebrae and prevent wedging.

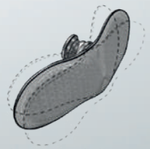
Primspine PRECISION

New hyperextensión orthosis with patented technology

Spherical system

Sternal adaptation system by spherical rotation which ensures that the chest plate fits precisely to the patient's sternum.

Two solid discs are connected by 2 ball joints and an internal spring to allow spherical movement between the discs.



The sternal disc pivots on the frame structure disc around the central axis, ensuring a precise fit to the patient's sternum.

PRIMSPINE PRECISION · HYPEREXTENSION BRACE

Ref.: PRS670

+ LIGHT WEIGHT + Versatil

Characteristics

- New sternum plate with spherical joint, which adapts in all angles and directions, ensuring perfect support.
- New lumbar plate design, more ergonomic adaptation and greater support area.
- New buckle system that allows an easier closure for the patient.
- New gray anodized finish
- Fully removable padding, which allows having several spare parts for washing. Padding set: (Ref. PRS6RAL 1 - PRS6RAL 2)
- Single tool for quick and easy adjustment.

Indications

Fractures and vertebral crushing or pain caused by traumatic injury, dorsal kyphosis, osteoporosis, Pott's disease, low back pain, lumbosciatica, chronic back pain, post-operative recovery after surgery for fractures of the vertebral bodies, or permanent orthotic care following surgery for tumours or metastasis of the vertebral bodies.

Hyperextension braces

AVANT · HYPEREXTENSION BRACE WITH SWIVELLING PELVIC BAND

Ref.: C35+AV

+ LIGHT WEIGHT + Versatil

Characteristics

- Hyperextension orthosis made of anodised duraluminium, 20% lighter than traditional models.
- It adapts through the sternal, pelvic, lateral and posterior plates.
- It offers continuous adjustment of the lateral (height) and sternal (width) plates.
- With oscillating sternal plate and axial joint, enabling adjustment of the inclination of the sternal support every 6°.
- It has an internal swivelling pelvic plate for comfortable sitting. Possibility of locking
- Padded plates with breathable fabric for better comfort: removable and washable.
- Ergonomic-functional locking tensioner with ratier circulation system.
- Also available in short body sizes.

Indications
Vertebral compression fractures, osteoporosis, dislocations, vertebral arthritis, vertebral infectious process. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Bone metastasis. Spondyloarthrosis.

AVANT · HYPEREXTENSION BRACE WITH ADJUSTABLE PUBIC SUPPORT

Ref.: C34AV

+ LIGHT WEIGHT + Versatil

Characteristics

- Hyperextension orthosis made of anodised duraluminium, 20% lighter than traditional models.
- It enables continuous adjustment of the lateral, sternal and pelvic plates (height, width and pelvis), which improve adaptation to the anatomy.
- Oscillating sternal plate and adjustable fixed pubic plate.
- Padded plates with breathable fabric for better comfort: removable and washable.
- Ergonomic-functional locking tensioner with ratier circulation system.

Indications
Vertebral compression fractures, osteoporosis, dislocations, vertebral arthritis, vertebral infectious process. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Bone metastasis. Spondyloarthrosis.

Hyperextension braces

PRIM · HYPEREXTENSION BRACE WITH SWIVELLING PELVIC BAND

Ref.: C35PB

Characteristics

- Hyperextension orthosis made of anodised duraluminium.
- It adapts through the sternal, lateral and posterior plates.
- It enables continuous adjustment of the lateral plates (height), and sternal plates (width), for better adaptation to the anatomy.
- With oscillating sternal plate and axial joint, enabling adjustment of the inclination of the sternal support every 6°.
- It has an external swivelling pelvic band, with the possibility of sequential locking (at any point along its swivelling path), offering greater seating comfort and facilitating a certain degree of mobility.
- Also available in short body sizes.

Indications

Vertebral compression fracture, osteoporosis, dislocations, vertebral arthritis, vertebral infectious processes. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Immobilisation in case of bone metastasis. Spondyloarthrosis.

PRIM · HYPEREXTENSION BRACE WITH AN ADJUSTABLE TILTING PELVIC BAND

Ref.: C37B

Characteristics

- Hyperextension orthosis made of anodised duraluminium.
- It adapts through the sternal, pelvic, lateral and posterior plates.
- It enables continuous adjustment of the lateral, sternal and pelvic plates (height, width and pelvis), for adaptation.
- Straight side straps for improved adjustability, wearability and comfort.
- Oscillating sternal plate and fixed pelvic band, tilting and adjustable at 3 points.
- Padded plates.

Indications

Vertebral compression fracture, osteoporosis, dislocations, vertebral arthritis, vertebral infectious process. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Immobilisation in case of bone metastasis. Spondyloarthrosis.

726091	L	94 - 114	48 - 59

Hyperextension braces

PRIM · HYPEREXTENSION BRACE WITH ADJUSTABLE PUBIC SUPPORT

Ref.: C34B

Characteristics

- Hyperextension orthosis made of anodised duraluminium.
- Rigid orthosis, designed in anodized duralumin to maintain the spine in hyperextension, limiting the anteroposterior and lateral movements.
- Ergonomic closure device to minimize the patient effort and avoid its unintentional opening.
- Continuous adjustment of the sternal, lateral and pelvic plates (width, height and pelvic), for a better fitting.
- These plates are padded to provide greater comfort to the patient.
- The sidebands are straight which improves the vertical adjustment and comfort.

Indications

Vertebral compression fracture, osteoporosis, dislocations, vertebral arthritis, vertebral infectious processes. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Immobilisation in case of bone metastasis. Spondyloarthrosis.

CODE	SIZE	CIRCUMF. (cm)	HEIGHT (cm)

721467	XL	104 - 114	53 - 59

PRIM · CRUCIFORM HYPEREXTENSION FRAME

Ref.: CAMP STAR

Characteristics

- Cruciform hyperextension orthosis, designed to keep the spine in hyperextension.
- The three-point pressure system provides stability between the thoracic and lumbar areas of the spine.
- Height-adjustable sternal and pubic plates.
- The polyethylene belt can be adjusted on the inside by means of a sliding strap that can be shortened if necessary.
- Dual side closure system.
- Hinged chest plate to improve the fit to the patient's anatomy.
- The height can be adjusted without disassembling the frame.

Indications

Vertebral compression fracture, osteoporosis, dislocations, vertebral arthritis, vertebral infectious processes. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Immobilisation in case of bone metastasis. Spondyloarthrosis.

Osteoporosis corset

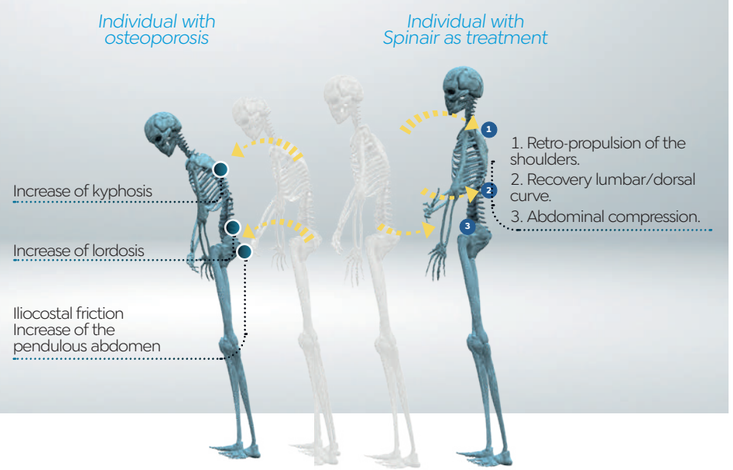
SpinAir, establishes a traction system based on three points, which facilitates the recovery of the anatomical position of the spine in a progressive manner.
It generates sufficient muscular tension to reinforce it and achieve the objective of postural and functional self-sufficiency.
This allows the patient to regain mobility and freedom to carry out their daily tasks.

Mechanism of action of Spinair

The action of the orthosis consists of a reminder of correct posture based on a system of forces.

The patient will progressively exercise the muscles to return to the correct position of the spine, correcting the hyperkyphosis.

This "dynamic" action strengthens the muscles on a daily basis.



SPINAIR · SPINAL ORTHOSIS

Ref.: SP500

Characteristics

- Its different elements make it a complete and functional orthosis for the progressivetreatment of muscular hypotonia and osteoporosis that occur as a consequence of metabolic or non-metabolic alterations that appear with age or other causes.
- Breathable and washable.

Indications

Osteoporosis, hyperkyphosis, vertebral arthritis, low back pain, spondyloarthrosis.

SPINAIR · ANATOMICAL CENTRAL BAND

Ref.: SP500AC

Characteristics

- Anatomically shaped extender band that allows the hip contour of the SP500 spine orthosis to be extended for patients who need it.
- With rounded shapes for increased comfort.
- It fits all sizes of the reference SP500.

CODE	HIP CIRCUMFERENCE EXTENSION

Flexible flaps
- For adaptation to the shoulders and neck.
- With soft padding to improve comfort.

Adjustable straps
- Adjustable for progressive correction.
- Removable and cuttable for a custom fit.
- Padded to protect your armpits
- Especially designed to leave the ribs free.

Numerical adjustment system buckle.
Easy to use progressive numerical tensioning system in three positions.
- Level 1: Initial phase of treatment, low level of retropulsion and tension.
- Level 2: Increases retropulsion, ideal sizes S1 and M1.
- Level 3: Increased retropulsion for all other sizes.

"Elastic on/off" zones
Full adaptability, maximun fastening

Light and mouldable spine
Made of duraluminium, light and mouldable to adapt progressively to the whole rehabilitation process. It must be custom shaped.

PRIMSPINE FOCUSBRACE · RIGID THORACIC LUMBAR SACRAL ORTHOSIS (TLSO)

Ref.: PRS666

Characteristics

- Bivalve thoraco-lumbosacral brace consisting of a high-density thermoformed polyethylene rear plate with paravertebal reinforcement ribs, positioned between two thick metal stays to offer greater stabilisation and thoraco-lumbar immobilisation. Removable and mouldable using a hot air gun.
- Removable front plate made from low-density polyethylene in a pleated shape to adapt to any type of abdomen.
- It incorporates two metal mid-lateral stays, which can be removed in order to aid adaptation.
- Made from highly durable and breathable 3D fabric, with inner cotton padding to ensure comfort when it comes into contact with the skin.
- Its padded straps activate shoulder retropulsion, thereby freeing the underarm area.
- The straps have crocodile-type hook-and-loop fasteners and can be trimmed in order to adapt to the patient's anatomy.
- The rear structure overlaps the front at the sides and is secured with a hook-and-loop fastening system.
- The four elastic anteroposterior adjustment straps, combined with the unique Self-ATB buckle system, enable the tension to be distributed evenly while facilitating adjustment. Easy to fit, even for post-surgical and bed-ridden patients.
- The intra-abdominal pressure exerted by its structure corrects hyperlordosis by achieving a high degree of thoraco-lumbar stabilisation, immobilisation and unloading.

Indications

Herniated discs, osteoporosis, spondyloarthrosis, spondylolysis (with or without stability), trauma, compression fractures, degenerative disc disease, postoperative fusion and chronic muscle disease.

Primspine

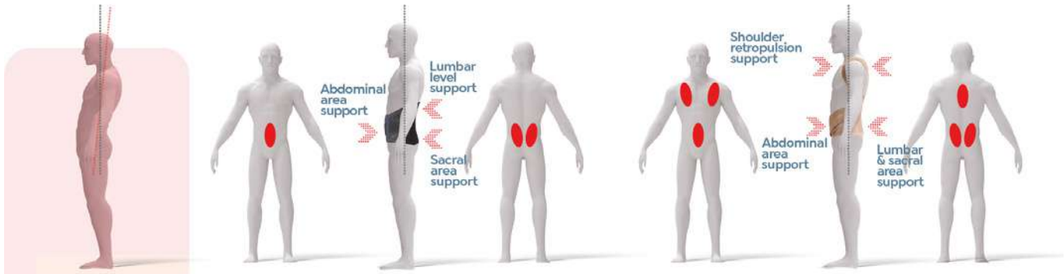
SPINE ORTHOSIS

A support level for every need

A new concept in the classification of spine orthoses to facilitate individualised treatment.

The elements and materials we use in the design of each orthosis: fabrics, tensioners, stays, thermoplastics, metals, etc., as well as the shape, size and thickness we apply **allows us to customise the treatment by establishing different support levels.**

Factors involved in good spine support: lumbar compression, lumbar support, abdominal compression, shoulder retropulsion (at dorsal level)



Patient with an orthosis that provides an optimal spine support

Stabilisations levels

1 2 3 4 5 6 7

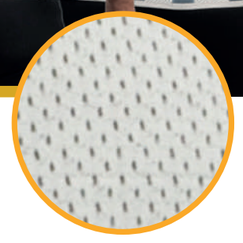
Exclusive fabrics.
Technology that cares for your back

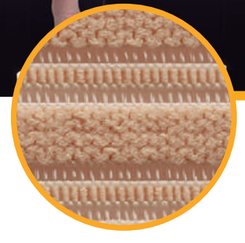
fitCONTOUR

Inelastic three-layer fitContour fabric

Capable of adapting to all anatomies.

The openings in the upper layer produce a “chimney effect” that allows the skin to breath.





Adaptation is the secret to comfort: A key feature that directly affects the level of support provided by the orthosis and multiplies the feeling of comfort.

Elastic fabric, with a double channel structure, highly breathable, which enhances the adaptation to the body, providing greater compression and multiplying the sensation of comfort.

Exclusive double-channel fabric

Inelastic back supports Primspine

PRIMSPINE GOLD · DORSOLUMBAR BACK SUPPORT TRIPLE TENSOR & PENDULOUS ABDOMEN (Semirrigid)

Ref.: PRS646G · PRS647G (pendulous abdomen)

Characteristics

- Semi-rigid thoraco-lumbar support belt. Made from non-elastic, three-layer breathable fabric.
- Four steel paravertebral stays, two plastic side stays and three steel spiral stays in the abdominal area provide a high degree of stabilisation.
- Support in the abdominal area is provided by 2 spiral steel stays.
- Two tensioners with three elastics to provide increased stabilisation and optimal fit.
- With adjustable straps that activate the retropulsion of the shoulders in order to recover the curvature of the spine.
- The shoulder strap tensioner improves the position of the shoulders to recover the curvature of the spine.
- Finger loops to facilitate closure and adjustment for people with hand ailments.

Indications

Back pain, hyperkyphosis, degenerative disc processes, spondylolisthesis, spondylitis, postoperative period, osteoporosis.

PRIMSPINE MODULAR · SEMI-RIGID THORACOLUMBAR SHOULDER SUPPORT

Ref.: PRS636BG OS · PRS636G OS

Characteristics

- Dorsolumbar shoulder support made of soft breathable fabric.
- Used in combination with the MODULAR PRIMSPINE semi-rigid back support, to make a dorsolumbar orthosis.
- With 2 steel stays as central containment reinforcement, which can be shaped to improve adjustment to the patient's anatomy.
- Padded shoulder straps that can be adjusted for a looser fit. They can be trimmed to fit the patient's height, thanks to their crocodile-type fasteners.
- Features micro velcro for easy and secure fastening to the back support.
- It can also be combined with the MODULAR PRIMSPINE MODULE to form a dorsolumbar brace.

Indications

Back pain, rehabilitation, muscle weakness, degenerative processes, incipient dorsal osteoporosis.

PRIMSPINE MODULAR · LOW/HIGH LUMBOSACRAL MODULE

Ref.: PRS650 · PRS651

Characteristics

- Lumbosacral module made of high-density polyethylene with a more anatomical, functional and comfortable design.
- It can be moulded by heat to adjust it to the patient's body.
- Lined with padded fabric with a soft and breathable feel to promote comfort. Removable for washing.
- It is used in combination with the MODULAR PRIMSPINE semi-rigid back support to form a brace and maximise stabilisation in the lumbosacral area.
- Features micro velcro for easy and secure fastening to the back support.
- Removable depending on the evolution of the treatment.
- It can also be combined with the MODULAR PRIMSPINE SHOULDER SUPPORT to form a dorsolumbar brace.

Indications

Lower back pain, lumbosciatica, osteoarthritis, osteoporosis, disc protrusion, herniated disc, spondylarthrosis, spondylolysis, soft-tissue injury, post-operative recovery.

Ref.: PRS630G · PRS630BG (Low) PRS631G · PRS631BG (High)

Characteristics

- Semi-rigid back support belt made of “boostFit” stretch fabric, highly breathable, with a double channel structure that enhances the adaptation to the body, providing better compression and comfort.
- Its design, with double band tensioners and its 4 rear steel stays, which can be shaped and fixed with an inelastic support piece, to provide a high degree of stability and lumbar containment.
- Specially designed for patients with a waist-hip difference.
- It also has a foam lumbar plate that provides heat and comfort to the area and can be removed when not required.
- Micro velcro fastening for a secure fit.
- As positioning and adjustment aids, it includes areas for fastening the tensioners and anterior finger loops to facilitate adaptation in cases of osteoarthritis of the hands or other disorders.
- It uses seamless, “high-frequency technology”, which promotes discretion and comfort.

Indications

Lower back pain, lumbosciatica, osteoarthritis, incipient osteoporosis, osteomalacia, disc protrusion, post-operative recovery, muscle weakness, sprain.

PRIMSPINE CARE+ · LUMBOSACRAL BACK SUPPORT. DOUBLE CRISS-CROSS TENSIONER. (Semi-rigid)

Ref.: PRS620BG · PRS620G

Characteristics

- Semi-rigid back support belt made of “boostFit” stretch fabric, highly breathable, with a double channel structure that enhances the adaptation to the body, providing better compression and comfort.
- It has 4 thick stays and double criss-cross tensioner in the lumbar area with front fastening, providing stability and better containment.
- It also has a foam lumbar plate that provides heat and comfort to the area and can be removed when not required.
- Micro velcro fastening for a secure fit, and front finger loops to facilitate adaptation in cases of osteoarthritis in the hands or other disorders.
- It uses seamless, “high-frequency technology”,which promotes discretion and comfort.

Indications

Moderate lower back pain, moderate lumbosciatica, rehabilitation, muscle weakness, strains, sprains, early-stage degenerative spinal column processes, disc protrusion.

PRIMSPINE CARE · LUMBOSACRAL BACK SUPPORT. (Semi-rigid)

Ref.: PRS610BG · PRS610G

Characteristics

- Semi-rigid back support belt made of “boostFit” stretch fabric, highly breathable, with a double channel structure that enhances the adaptation to the body, providing better compression and comfort.
- It has a rear crossover for greater support and 4 thick stays, which provide great containment in the lumbar area.
- The lumbar crossover is the most suitable system when a high degree of support is required in a specific area.
- Micro velcro fastening for a secure fit, and front finger loops to facilitate adaptation in cases of osteoarthritis in the hands or other disorders.
- It uses seamless, “high-frequency technology”, which promotes discretion and comfort.

Indications

Mild lower back pain, muscle weakness, mild lumbosciatica.

Elastic back support

CAMP ONE · HIGH LUMBOSACRAL BACK SUPPORT

Ref.: 533PG

Characteristics

- Low-stretch, breathable fabric.
- Reinforced with 8 flexible vertical stays, 2 spiral stays in the front, inguinal and back area, and 2 malleable paravertebral stays to provide enhanced stabilisation and comfort.
- With 5 elastic tensioners for increased support and compression.
- The exclusive “Self-ATB Buckle System” provides uniform pressure distribution.

Indications

Lower back pain, lumbosciatica, herniated disc, muscle weakness or atony, postoperative recovery from lumbar surgery, arthritis, lumbar
osteoarthritis.

Elastic back support

Elcross L·U·X

ELCROSS LUX · LUMBOSACRAL BACK SUPPORT FOR PENDULOUS ABDOMEN

Ref.: 3134BG

Characteristics

- Semi-rigid lumbosacral back support for pendulous abdomen, made from two different base materials. The rear base material is composed of a two-layer Lycra fabric on the outside and Lycra with carbon fibre fabric on the inside.
- The rest of the support belt has the two-layer Lycra fabric on both sides.
- The orthosis has elastic tensioners to increase the support if required.

Indications

Lumbosciatica, rehabilitation, degenerative disc processes, disc protrusion, herniated disc, lumbar spondyloarthrosis, postoperative recovery.

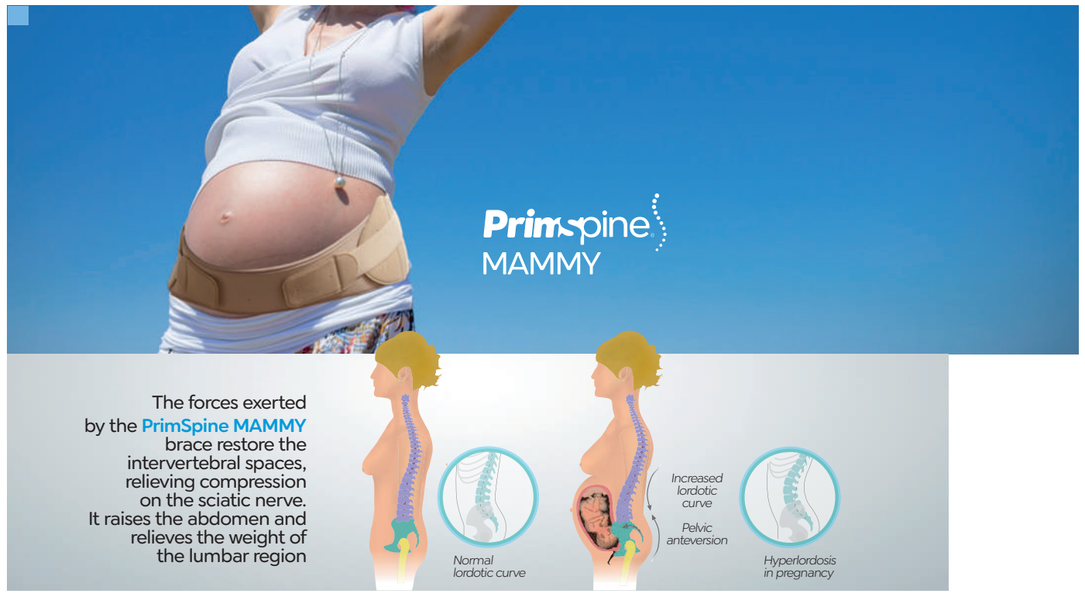
Maternity back support



PRIM SPINE · MATERNITY BACK SUPPORT

Ref.: PRS615BG OS · PRS615G OS

Characteristics

- Front anatomical band made of breathable, soft and light velour, which raises the abdomen, relieving the feeling of heaviness in the pelvic area.
- It incorporates “boostFit” breathable stretch fabric, with a double channel structure that improves adaptation to the body, providing better compression and comfort.
- 2 lumbar containment stays that support the spine and improve posture, relieving back pain.
- 2 lateral tensioners that can be adjusted to unload pressure depending on the needs of the mother-to-be.
- It uses seamless, “high-frequency technology”, which promotes discretion and comfort.
- With help guides for the correct fitting of the belt in each pregnancy stage.

Indications
Mild to moderate lower back pain during pregnancy.

Shoulder support

Elcross L·U·X

Braces reinforced with crossed elastic straps in the dorsal area

2 rear stays that help to improve postural position

Resistex® Carbon is a technological yarn with unique technical characteristics, obtained by combining textile fibres with a continuous filament of conductive material based on activated carbon.

CARBON

Antistatic
Thermoregulator
Protective (UV, static energy)

ELCROSS LUX · SHOULDER SUPPORT

Ref.: 3138BG

Characteristics

- Orthosis made of breathable double layer lycra material.
- On its inner rear side, it uses carbon fibre with Resistex® Carbon technology, especially developed to offer to the patient maximum comfort and breathability.
- Maintains the spine in anatomical position, avoiding incorrect and/or kyphotic positions
- It has two rear stays that help to improve postural correction.
- Its braces promote retropulsion of the shoulders and are reinforced with crossed elastic straps in the dorsal area, ensuring adequate correction.

Indications

Posture reminder. Minor dorsal injury.

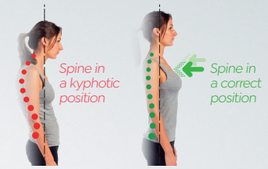
Primspine BALANCE

Progressive traction technology, induces shoulder retraction, helping to correct posture gently and gradually

gradual traction

Repositionable armpit pads

Breathable Latex-free fabric



The use of **Primspine Balance** promotes postural re-education through gentle traction that stimulates proprioception and corrects the positioning of the shoulder girdle.

PRIMSPINE BALANCE · SHOULDER SUPPORT

Ref.: PRS335

Characteristics

- Orthosis made of breathable monofilament stretch fabric.
- Designed with progressive traction technology, PRIMSPINE BALANCE induces shoulder retraction, helping to restore straigh posture gradually and comfortably.
- Acts as a postural reminder for patients with functional kyphosis or poor posture habits.
- Repositionable armpit pads for maximum comfort.
- Its Lightweight materials with high skin tolerance, allow prolonged use with no discomfort and complete freedom of movement.
- Ergonomic and discreet design Easy to adjust and adapt to the patient's anatomy.

Indications

Prevention of postural disorders in adolescents and adults. Mild postural kyphosis. Postural fatigue in sedentary users. Complement to postural re-education and physiotherapy programmes.

Thoracic protectors Ecoprim

ECOPRIM3 · CHEST PROTECTOR

Ref.: ECOPRIM3

Characteristics

- High support vest to stabilize the chest after cardiac surgery, which allows normal breathing and cushion the impact by acting when the patient coughs.
- Ease of adjustment to suit all patients.
- Made of breathable and washable materials.
- Ergonomic handles (made of ABC) to provide a more comfortable and effective fit.
- Double-sided velvet.

Indications
Recommended to be used at least during one month after surgery

Benefits of proper placement and use for the speedy recovery

1. Place Ecoprim3 as a vest, introducing arms through the straps.
2. With the closed clip straps, adjust its length so that the chest strap is just below the armpits.*
3. Adjust the gap between the rings (5-10 cm.),tightening the chest strap with side Velcro. The distance should allow the patient to grab the ring with one hand, without them reach together.*
4. Place the tape central to patient access to the rings be simple at all time.*

* Cut off the excess fabric, if necessary.

ECOPRIM · CONTINUOUS COMPRESSION THORACIC PROTECTOR. FEMALE

Ref.: ECOPRIMCCM

Characteristics

- Ecoprim continuous compression thoracic protector specially designed for women.
- Provides compression to the thorax without affecting the breasts so that patients can lead a normal life during the recovery period.
- The central pad protects the wound from any unwanted pressure or chafing.
- The straps go around the breasts, leaving them free from pressure and constraint at all times while ensuring the necessary compression is applied to the chest.
- Intuitive waistcoat design – easy for the patient to put on and take off.
- Padded sections simultaneously cushion and compress for enhanced comfort.
- The central buckles are positioned over the central pad to avoid any possible contact with the wound.

Indications
Recovery period after cardiac or thoracic surgery.

Collars

PRIM · I.M.O. SOMI COLLAR

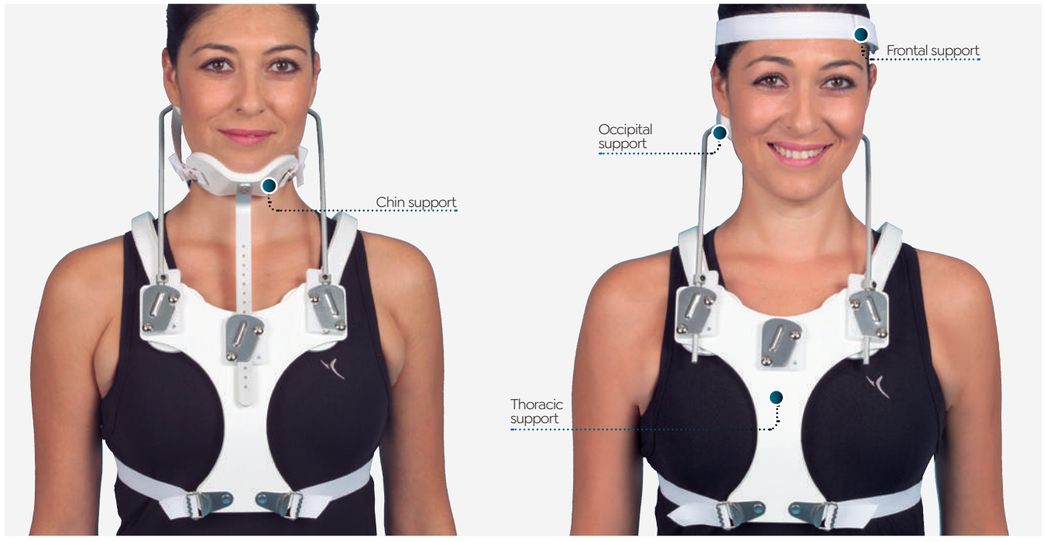
Ref.: E45

Characteristics

- SOMI collar that keeps the cervical spine immobilised.
- It is composed of a chin support and an occipital support that are attached to a thoracic plate through two metal bars located behind the head and by an anterior support at the level of the jaw.
- All this is fixed to a central piece that rests on the thorax like a rigid vest.
- It allows the patient to lie down comfortably while maintaining immobilisation.
- The chin support and occipital support should be worn throughout the day.
- They can be easily removed and replaced by the frontal support for daily activities that require the use of the jaw, such as eating.
- Possibility of adaptation to patients undergoing traction.

Indications

Severe neck pain. Cervical root pain of comprehensive origin. Severe trauma. Postoperative. Cervical fracture. Cervical osteoarthritis. Inflammatory process that causes contracture.



CODE	SIZE	HEIGHT (cm)

dermodry® BY COOLMAX INSIDE

100% breathable, 100% dry fabric

Dermodry® is the technical fabric that accelerates the moisture absorption process, keeping the skin always dry.

Manufactured with Coolmax® thread, moisture is continuously transmitted to the outside and it does not return in any case to the skin, giving the user a nice and confortable feeling.

Humerus orthosis

HUMERUX · HUMERUS ORTHOSIS

Ref.: EVOH300

Characteristics

- Thermoformed bi-valve humerus orthosis made from high-density polyethene, with a neutral design and a soft, comfortable, padded textile cover.
- Breathable and skin-friendly lining in technical fabric for a modern look.
- Comprises 2 thermoplastic valves integrated into the lining, which can be removed and thermoformed* to achieve a perfect anatomical fit for the patient.
- Adjusts with 3 humeral velour straps threaded through 3 butterfly buckles, with hook-and-loop closure and anchor stop to ensure easy, comfortable and secure fastening.
- Valves and straps stabilise the humerus by applying customised uniform compression to the surrounding soft tissues.
- The Y-traction System uses a traction device to increase and adjust the tension, helping to maximise control over the alignment, fixation and immobilisation of the humerus. Keeps the head of the humerus within the glenoid cavity (dropped shoulder syndrome).
- Easy-fit chest strap to prevent the orthosis from slipping down. Padded armpit support for comfortable underarm fitting prevents any chafing or discomfort.
- Bilateral.

Indications
Diaphyseal humerus fracture, postoperative.

Epicondylitis strap

MOTTIO · EPICONDYLITIS STRAP

Ref.: T29

Characteristics

- Epicondylitis strap on a breathable fabric support, with seamless “high-frequency” technology for better skin protection.
- Anatomical and re-positionable condyle pad that unloads the tendon and produces a massage effect.
- Adjustable elastic strap for dynamic compression adjustment.
- Anatomical structure for enhanced forearm fit.
- Hypoallergenic non-slip support to prevent the strap from rotating.
- Bilateral.

Indications

Sport or work-related lateral epicondylitis (tennis elbow) or medial epicondylitis (golfer’s elbow).

Antebrachial orthosis

PRIM · ANTEBRACHIAL ORTHOSIS

Ref.: PSL150

Characteristics

- Forearm splint made of 3mm thick low-density polyethene.
- Consists of 2 dorsal and ventral shells, joined by velour straps.
- The dorsal side of the splint extends to the metacarpophalangeal joint, preventing dorsal flexion and allowing palmar flexion.
- Inner lining made of 3mm thick Plastazote.
- Fitting: The shells may partially overlap at the sides.
- Right and left versions.

Indications

Forearm and wrist fractures, postoperative recovery.

Thermo-foam Wrist supports

PRIM · LONG, PASSIVE ORTHOSIS WITH THUMB

Ref.: 943

Characteristics

- Passive wrist orthosis; hand and thumb made from double-layer, radiolucent thermo-foam, with aeration system.
- 45% lighter than traditional orthoses.
- Its outer layer of high-density foam gives the orthosis exceptional rigidity while remaining soft and pleasant to the touch.
- Interior foam layer padded for enhanced comfort.
- Thermoformable with a hot air gun for a perfect fit to the patient's anatomy.
- Immobilises the carpometacarpal phalangeal joint.
- Right and left versions.

Indications

Postoperative recovery, carpal tunnel syndrome, neurological injury, fracture or fissure, degenerative disease. De Quervain's tendinitis, hand spasticity.

Inelastic stabilising Wrist supports airMed

AIRMED SHORT/LONG IMMOBILISING WRIST AND THUMB SUPPORT

Ref.: AM206G y AM208G

Characteristics

- Passive wrist orthosis, made of soft, breathable velour fabric with small ventilation channels using “high-frequency” 100% seamless technology, enhances the treatment’s effectiveness while providing maximum comfort.
- It comes with 1 malleable palmar splint to limit dorso-palmar flexion, 2 dorsal stabilising splints to restrict lateral wrist movements and 1 thumb splint to support and immobilise the joint. All the splints are removable and made of malleable aluminium to ensure a custom fit.
- An adjustable closure strap provides extra compression and support for the wrist.
- One-handed adjustment system with 2 buckles and velcro fasteners.
- Open thumb adjustment for a personalised fit.
- Stabilises and immobilises the carpometacarpal and thumb joint.
- Right and left versions.

Indications

Combined wrist and thumb injuries, ulnar ligament sprains (skier’s thumb), rhizarthrosis, fracture, Bennett’s dislocation, carpal tunnel syndrome, Guyon’s canal syndrome, De Quervain’s tendinosis, tendonitis, ligament injury, trauma, stress on the wrist and thumb joints, residual instability, pre/post-operative and post-trauma treatment.

Dynamic hand and finger positioning splints

PRIM · METACARPOPHALANGEAL FLEXION SPLINT

Ref.: C4

Characteristics

- Active orthosis featuring a steel plate covered with polyethene foam.
- With rubber anchor to facilitate flexion.
- With roller for radial paralysis.
- Bilateral.

Indications
Limited flexion due to paralysis, injury, retraction, or after extensor tendon repair. Metacarpophalangeal capsulotomy. Moderate retraction of the collateral ligaments of the metacarpophalangeal joints.

PRIM · METACARPOPHALANGEAL EXTENSION SPLINT

Ref.: C5

Characteristics

- Active orthosis featuring a steel plate covered with polyethene foam.
- With a rubber anchor that facilitates the extension of the metacarpophalangeal joint.
- Right and left versions.

Indications
Limitation of metacarpophalangeal extension due to distal radial nerve injury or after tendon repair at the same level.

Dynamic finger extension and flexor splints

PRIM · FINGER EXTENSOR SPLINT

Ref.: PSL180

Characteristics

- Dynamic splint for proximal interphalangeal joint extension.
- Helps immobilise and reduce stress on the joint, alleviating the flexor tendon injury.
- 3-point ergonomic support enhances the user's comfort while keeping the finger in extension.
- The central support in the form of an adaptable ring* stabilises the interphalangeal joint and prevents deviations and unwanted movements.
- Its dynamic vertical structure, enables flexibility, facilitating joint movement while rehabilitation is carried out.
- Padded for total dermatological compatibility.
- Option to increase or reduce the tension depending on the degree of injury.
- Bilateral.

**adaptable to the user's anatomy and inflammation phase.*

Indications

Injury to or retraction of the flexor tendon of the finger's interphalangeal joints. Tissue retraction on the palm side of the finger or the finger joints.

Hip abduction orthosis

PRIM · HIP ABDUCTION ORTHOSIS

Ref.: PSL699OS

Characteristics

- Hip stabilising orthosis with a design based on the three-point principle
- Its full control articulation allows to regulate the flexion-extension movements from 0° to 90° in intervals of 15°, to control the abduction in the positions of 0°, 15° and 30°, as well as offering five positions for personalising the angle of inclination of the upper bar.
- 2 telescopic plates, allowing the orthosis to be adjusted to the height of each patient.
- The bivalve thigh cuff incorporates a condylar support that, together with the straps and buckles, controls the leg's internal rotation and retraction, leading it to external rotation, thereby ensuring that the hip is positioned correctly.
- The girdle-shaped pelvic band, with a lumbar support and elastic tensioners connected to a belt, thereby enabling adjustment of compression levels. The band is divided into 3 zones and incorporates support guides in order to facilitate fitting for bed-bound patients.
- With removable padding providing protection and comfort.
- Bilateral.

Indications
Post hip surgery. Replacement or repair of total hip prosthesis. Hip dislocation. Fractures associated with hip replacement. Instability of the hip joint. Osteoporosis. Loosening of hip endoprostheses. Moderate to severe coxarthrosis.

Postoperative knee braces

E·SENSE · POSTOPERATIVE ROM KNEE BRACE

Ref.: RS-3000

Characteristics

- Postoperative knee orthosis with ROM joints.
- With telescopic sidebars that adapt to a lengthof between 46 and 69 cm.
- Adjustment bands with crocodile Velcro® fasteners for a good fit.
- The integrated non-slip pads prevent the orthosis from rotating or slipping down.
- One-click joint locking at 0°,15° and 30° of fixed extension.
- Provides extension from 0° to 90° and flexion from 0° to 120° in10° intervals with independent adjustment. The locking and ROM functions cannot be used at the same time.
- Lightweight and comfortable: 960 gr
- Bilateral.

Indications
Postoperative or post-traumatic immobilisation. Tibial plateau fracture, osteochondral repair, ACL, PCL, MCL, LCL ligament injury and repair, meniscal repair, patellar tendon surgery, condylar fracture, knee sprains and high tibial osteotomy.

PRIM · CROSSED LIGAMENTS KNEE BRACE

Ref.: R100

Characteristics

- Orthosis with rigid metal frame covered with soft foam for enhanced user comfort.
- Fits to the thigh and leg with four velcro straps, leaving the knee free.
- Adjustable along both axes using screws.
- Extension control: 0° to 40°, and flexion: 45° to 90°.
- The two lateral joints should be aligned with the centre of the knee.
- Once adjusted, the joints are fastened with screws until the desired angle is achieved.
- Right and left versions.

Indications
Pre- and post-surgical treatment of cruciate ligament injuries. Control of flexion and extension Control of mediolateral instability.

Multi-positional foot-ankle splint

PRIM · MULTI-POSITIONAL FOOT-ANKLE SPLINT

Ref.: PSL800

Characteristics

- Anti-rotation splint for foot-ankle positioning designed to immobilise the foot and provide postural control of the lower limb joints.
- Made of high-density polyethene with a breathable three-layer fabric inner lining, which can be removed for washing.
- Incorporates a triangular plantar plate to stabilise the splint, with internal or external regulation from 0° to 15°.
- Its medial and lateral splints allow plantar and dorsal flexion to be adjusted by up to 60°, in 10° intervals.
- Adjustment system with ratier straps and double push-pin fasteners with buckles for closure.
- Includes integrated protective pads for optimum comfort.
- Easy to fit and remove.
- Bilateral.

Indications

Postoperative therapy of the knee, hip and foot whenever control of lower limb rotation and dorsal flexion (neutral position, internal rotation or external rotation) is required. Hemiplegia, paraplegia, lower limb paralysis, immobilised or comatose patient (ICU patient). Plantar fasciitis.

Walkers

PRIM · FIXED, SHORT WALKER PROTECT

Ref.: W201

Characteristics

- Immobilising orthosis for the upper ankle joint made from moulded injected polypropylene and featuring a lightweight, durable and stable design.
- Two fixed side supports provide excellent stability for the foot/ankle.
- Includes two rigid sections, one front and one rear, and a padded instep to reinforce immobilisation.
- The padded textile interior lined with a soft, breathable velour fabric protects against impacts and ensures optimum comfort.
- Two additional condylar pads provide increased comfort around the malleoli.
- The non-slip rocker sole allows for a complete gait cycle. Facilitates the push-off phase of the gait.
- Adjustable Velcro® straps guarantee complete immobilisation.
- Includes a toe cover as an additional piece that can be fitted or removed depending on the patient's preferences.
- Radiolucent.
- Simple and convenient to fit.
- Allows for the addition of wedge inserts.

Indications

All degrees of ankle sprain. Soft tissue injuries to the foot and/or ankle. Stable fractures of the foot and ankle. Achilles tendon surgery. Severe plantar fasciitis. Post-ORIF (open reduction and internal fixation) and surgical stabilisation following tendon and/or ligament repair. Metatarsal fractures. After bunionectomy.

PRIM UPGO · DROP-FOOT ORTHOSIS

Ref.: PSL890

Characteristics

- PRIM UPGO is an innovative, dynamic orthosis designed to provide functional support for the dorsal flexion, controlling medio-lateral deviations of the foot, during the swing phase of gait in cases of foot drop caused by flaccid paralysis.
- It is made up of 3 elements:
  1. Supramalleolar band made of flexible and stabilising fabric that adapts by means of a micro-velcro closure with integrated double adjustment. Anatomical silicone padding to release and protect the Achilles tendon
  2. Shoe support with microvelcro fastening which fits both lace-up and Velcro footwear without the need for metal hooks.
  3. An innovative strap-and-buckle traction system connects the support to the band and keeps the foot in a physiological position.
- Made of soft, breathable, anti-pilling velour fabric with an onSteam® microfibre inner fabric that feels like skin and has thermo-regulating properties. With high-frequency seamless technology for maximum comfort.
- Bilateral

Indications

Flaccid equinus.

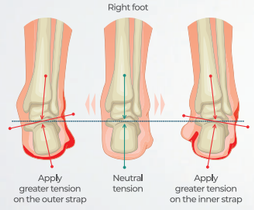
Innovation for the benefit of the patient: comfort and precision

Individual adjustment of medium-lateral corrections
Elastic straps allow the degree of dynamic correction to be adjusted according to the needs of each patient, allowing the ankle varus/valgus foot to be slightly corrected, by tightening each of its straps to a greater or lesser extent, or by exerting central traction if no lateral component is to be corrected.



One click fitting
PRIM UPGO's unique, patented* magnetic buckles can be adjusted in one click so that the patient can fit and remove the orthosis independently, with just one hand (in cases of hemiplegia and hemiparesis).

EASYCLICK SYSTEM

Memory effect
Buckles with a locking system that **keeps the degree of correction** performed by the adapter fixed, without the patient having to adjust it.

*Patent being processed.

PRIM UPGO · PLANTAR BAND

Ref.: PSL8ABD OS

Characteristics

- The lightweight, anatomically shaped plantar band allows the PRIM UPGO foot drop orthosis to be worn without shoes. It can be used with open shoes, flip-flops, sandals or even barefoot, but we recommend using it with socks.
- It is positioned in the central area of the sole of the foot and attaches to the supramalleolar band with the same system as the shoe support.
- Foam padding under the sole of the foot for enhanced comfort.
- Simple and secure velcro adjustment system.
- With high-frequency seamless technology for maximum comfort.
- Bilateral

Textile drop foot orthosis

PRIM · TEXTILE DROP-FOOT ORTHOSIS

Ref.: ATX01

Characteristics

- Dynamic drop-foot orthosis designed to support dorsal flexion during the push-off phase of the gait.
- Made from soft, breathable velour fabric with “high-frequency” technology and seamless design for maximum comfort.
- Comprises 2 parts: a supra-malleolar strap that fits above the ankles and non-slip support that fits between the tongue and shoelaces using a central anchoring hook type arrangement (single or double).
- The two parts are joined by an elastic cord that exerts adjustable traction, allowing more or less flexion according the patient’s needs.
- The rear of the supra-malleolar strap has an integrated gel pad that protects and provides comfort to the Achilles tendon.
- Lined instep area to prevent unwanted chafing and compression.
- Discreet, flexible and easy to fit: doesn’t take up any room inside the shoe.
- Designed for use with lace-up footwear.

Indications
Flaccid equinus.

Drop foot orthosis

PRIM · RANCHO DE LOS AMIGOS DROP FOOT ORTHOSIS (3/4 INSOLE)

Ref.: D81 · D81M · D82

Characteristics

- Rancho dropfoot orthosis made from laminated thermoformed polypropylene.
- Offers rigidity and stability while allowing enough flexibility for free dorsal flexion of the foot.
- Plantar limitation at 90° of flexion.
- Short foot template that reaches the metatarsal heads. Thermoformable with a hot air gun for a better adaptation to the patient's anatomy.
- **D81M:** Includes assembled fastening system.
- **D81:** Includes non-assembled fastening system.
- **D82:** Complete insole. Does not include fastening system
- Right and left versions

Indications

Equinus of the foot due to neurological disease. Lesions to the external popliteal sciatic nerve, injuries to the central nervous system that present with equinus of the foot with or without spasticity, hemiplegia (stroke), hemiparesis, infantile cerebral palsy, head trauma. Neuromuscular injuries, such as muscular dystrophy, inherited degenerative diseases that occur with a club foot. Instability in the ankle. Post-polio syndrome, myelomeningoceles. Do not use in patients with varus or valgus hindfoot.

Polypropylene drop foot orthosis

PRIM · RANCHO DE LOS AMIGOS DROP FOOT ORTHOSIS (COMPLETE INSOLE)

Ref.: NA400 · NA410

Characteristics

- NA400 Rancho de los Amigos dropfoot orthosis designed with a full foot template. Made of injected copolymer polypropylene. White.
- NA410 Rancho de los Amigos dropfoot orthosis designed with a full foot template. Made of homopolymer polypropylene with 20% injected talc (less flexible).
- Provides adequate foot flexibility in the stance phase of the gait, limiting plantar flexion to 90° in the swing phase.
- Padded closure system with Velcro® adjustment.
- Includes a strap to fix the orthosis to the foot.
- Thermoformable with a hot air gun for a better adaptation to the anatomy of each patient.
- Do not use in patients with varus or valgus hindfoot.
- Right and left versions

Indications

Stabiliser ankle supports

PRIM · MEDIOLATERAL ANKLE STABILISER

Ref.: NA500

Characteristics

- Bivalve orthosis that provides mediolateral stabilisation for the tibiotarsal joint.
- The device characteristics highly-resistant anatomical polypropylene supports that provide a rigid structure and allow dorsal flexion while restricting mediolateral movements.
- Integrated horseshoe-shaped pads for an enhanced fit.
- Simple adjustment thanks to its Velcro® fasteners.
- Bilateral

Indications
Mild to moderate ankle sprains. Tendinitis. Postoperative recovery.
Instability of the ankle joint.

Postoperative shoes

PRIM · POSTOPERATIVE OPEN SHOE

Ref.: PS100

Characteristics

- Post-surgical shoes that protect and keep the foot in the correct position during the recovery process.
- Made from breathable fabric with an open toe for comfortable use.
- Reinforced heel for feet with problems in the calcaneus area.
- Non-slip black sole for increased safety.
- Easy, discreet, and secure fastening system allows the shoe to be adapted to feet with significant deformities, postoperative bandages, or plaster casts.
- Bilateral.

Indications
Postoperative, recovery, feet in a cast.

PRIM · POSTOPERATIVE HEEL SHOE

Ref.: PS200

Characteristics

- Post-surgical shoes that protect and keep the foot in the correct position during the recovery process.
- Relieves load from the forefoot: this shoe has the heel in the hindfoot and leaves the forefoot area free and non-load bearing, facilitating the support and push-off phase of the gait.
- Its design guarantees support for the calcaneus.
- Light support in dorsal flexion, promoting the heel.
- Made from breathable fabric with an open toe for comfortable use.
- Black sole with ergonomic slope that guarantees stability: non-slip for increased safety.
- Easy, discreet and secure fastening system that allows the shoe to be adapted to feet with deformities.
- It incorporates a strap that supports the ankle and helps the shoe to adapt to the instep.
- Contralateral shoe height: it's important to use a shoe of a similar hindfoot height so that the hip and pelvic tilt remain functional.
- Bilateral.

Indications
Postoperative recovery, especially for the forefoot and toes, vascular problems that require the load to be eased.

FOOTCARE

ComforSil

COMPLETE RANGE OF PRODUCTS MADE FROM SILICONE

Comforsil offers quality solutions for foot problems.

100% pure silicone hypoallergenic and non-toxic products.

New textile solutions with silicone. **Seamless**. No chafing. For use with any type of shoe.

Strength
The properties of the silicone guarantee long-term durability and resistance to cracking throughout the required period of use and at the required intensity.

Comfort
They gently adapt to the feet ensuring recovery and cushioning at load points and in pressure areas.

Soft solution

BIG TOE SEPARATOR (Hourglas s-shaped)

Ref.: CC218

Characteristics

- Straightens and aligns the big toe, corrects the position of the 1st toe when a bunion exists and relieves pain in incipient bunions.

x2

CODE	SIZE
800398	S
800397	M
800396	L

EXTRA-THIN SEPARATOR (Crescent shaped)

Ref.: CC206

Characteristics

- Prevents friction between toes and the irritation produced by the condyle of the adjoining toe, preventing the appearance of interdigital calluses and soft corns.
- Placement on any toe.

x3

CODE	SIZE
800395	S

PAEDIATRIC ORTHOSIS

Paediatric line of orthosis for children´s recovery of muscle and joint injuries

MYPRIM KIDS is a line with bright colours and fun shapes specially created for children. Designed with the latest materials to ensure the comfort of the entire line, vital to the wellbeing of the child.

Seamless technology

MYPRIM KIDS has been developed with the latest **bonding technology** which allows the **seamless** joining and adhesion of the different parts of the product.

Absolute comfort

The absence of thread and seams significantly reduces chafing of the skin, preventing discomfort and increasing the well-being of the child.

PAEDIATRIC LINE

Paediatric hip abduction orthosis

MYPRIM KIDS · PAVLIK HARNESS

Ref.: MPK690

Characteristics

- Paediatric orthosis for hip abduction and external rotation made of breathable, comfortable, and soft-to-the-touch fabric. Made with seamless bonding Friendly Skin Technology to protect the skin from possible chafing.
- Waistcoat-type fitting system for an effortless, easy fit.
- All-around comfort: adjustable double-padded body, padded straps and boots made in soft fabrics with velcro fastenings for a straightforward and secure fit.
- The foot support boots have two layers for full functionality:
  - Inner layer of soft, plush terry cloth, which can be removed for washing.
  - Outer layer of soft velour, which maintains the functionality of the orthosis when the inner layer is being washed.
- The shoulder straps can be adjusted to suit the size of the infant. They have a secure buckle system that stops the straps from coming loose during use.
- The abduction of each hip can be adjusted independently.
- Freedom of movement prevents necrosis of the femoral head.
- Shaped so as not to interfere with nappy changing.
- Designed with bright colours and fun shapes.

Indications
Congenital luxation and subluxation of the hip. Hip dysplasia.

PAEDIATRIC LINE

Paediatric hip abduction orthosis

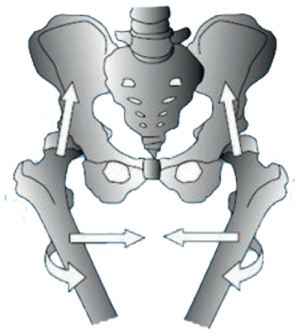
Functional paediatric hip orthosis that does not lock with ROM.

Two models to meet the needs of all patients

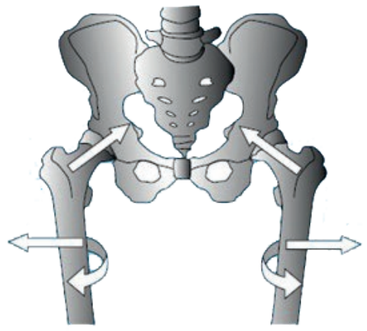
Functional benefits:

Dynamic function: non-locking.
- Tones the adductors tone to achieve more positive positioning
- Correct alignment promotes the function of all three planes for proper muscle performance.
- Controls adduction to improve sitting, standing, ambulation, and walking functions.
- Facilitates increased extension of the trunk.

Without SWASH



With SWASH



PRIM · VARIABLE HIP ABDUCTION ORTHOSIS SWASH STEADY

Ref.: SC3-SW3

Characteristics

- Solyethene pelvic orthosis that extends from L2/L3 to the distal margin of the sacrum, providing maximum pelvic and thoracic support. Patients with low trunk tone and very limited trunk control may benefit from increased posterior and lateral support.

USER PROFILE:
- When maximum trunk control is required for patients who lack sufficient muscle strength or upper trunk control to stay upright.
- The patient cannot walk.
- Increased pelvic coverage triggers an improved sensorineural motor response.

Indications
Cerebral palsy, with scissor gait or instability when sitting due to excess abduction, hip subluxation.

steady SWASH®

PRIM · VARIABLE HIP ABDUCTION ORTHOSIS SWASH GO

Ref.: LP3-SW3

Characteristics

- Rear aluminium frame that extends from approximately L2/L3 to S1/S2, with iliac extension.

USER PROFILE:
- The principal goal is to control the scissor gait.
- If the patient has limited space between the iliac crest and the rib cage.

Indications
Cerebral palsy, with scissor gait or instability when sitting due to excess abduction, hip subluxation.

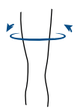
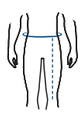
Pelvic plate measurements:
SC3-SW3: For maximum trunk stability control, measure at natural waist height.
LP3-SW3: Measure at the height of the anterior ilium bone. Ideally, fit the orthosis on the mid-pelvic girdle to obtain good pelvic stability.



Thigh cuffs:
Measure at the distal end of the thigh, close to the condyles.
Ideally, the measurement should be as close to the distal end as possible, without pressing or interfering with the popliteal area.
However, if there is pressure on the chest, excessive flexion of the spine or too much tension in the hamstrings, relieve by moving the pads upwards between 2.5 and 7.5 cm.



Uprights:
Measure from the waist to the middle of the kneecap. In the final fitting, it should be level with the thigh pad.
115° narrow base
123° wide base

PAEDIATRIC LINE

Paediatric correctional orthosis

BEBAX · PAEDIATRIC CORRECTIONAL ORTHOSIS

Ref.: BB

Characteristics

- Multi-articulated boot that enables a gradual correction of congenital forefoot deformities in newborn babies on all three planes.
- Minimises muscle or neurological disorders.
- The approximate duration of treatment is 35 days.
- Can be used to correct clubfoot before the infant can walk.
- Right and left versions

Indications
Metatarsus varus, metatarsus adductus, alipes valgus, valgus foot and reducible supinated foot. Residual forefoot valgus after prior foot drop treatment. Muscular or neurological problems that cause foot deformities in children.

SIZE
From 7,5 to 10 (in increments of 0,5 cm)
From 10,5 to 13,5 (in increments of 1 cm)
From 14,5 to 16,5 (in increments of 1 cm)

Right and left versions. Consult: References and CODE

TIBAX · PAEDIATRIC CORRECTIONAL ORTHOSIS

Ref.: TIBAX

Characteristics

- Orthosis for children under 3 years of age that allows for a quick and precise adjustment of the correcting rotation for both feet (adjustment key included).
- The rotational adjustment is readable on a graduated scale.
- Allows the shoe to be adapted to each of the platforms or the direct placement of the BEBAX orthosis for the treatment of forefoot deformities.
- It can be inserted or removed without losing the prescribed setting.
- Supplied with two spreader bars and the parts necessary to adapt it to conventional boots or BEBAX orthosis.
- BEBAX orthoses are not included.
- Right and left versions

Indications
Correction of the tibial rotation system and coxa anteversa. Clubfoot (combining the bar with the BEBAX orthosis). Postoperative recovery. Treatment of pathological tibial rotations. Acquired clubfoot-varus (poliomyelitis, post-injection paralysis, etc.). Infant hip subluxation and luxation.

CLUBAX · PAEDIATRIC CORRECTIONAL ORTHOSIS

Ref.: C11 · C12 · C21 · C22

Characteristics

- Multidirectional correction orthosis for the lower limb of infants.
- Can be adapted to the morphology of the lower limb and allows the therapist to choose the degree of knee flexion.
- Choose between adjustable joints or mobile joints.
- Not compatible with the large BEBAX orthosis.
- Does not include BEBAX.
  - C11 CLUBAX adjustable joint small
  - C12 CLUBAX adjustable joint large
  - C21 CLUBAX mobile joint small
  - C22 CLUBAX mobile joint large

Indications
Clubfoot, tibial rotation, valgus of the knee. Unilateral clubfoot-varus.

PRIM · DENNIS BROWN CLAMP-ON FITTING D49 OR RIVET-ON FITTING D47

Ref.: D49 · D47

Characteristics

- Corrects posture or deformities of the infant's feet, ankles or legs.
- Make sure the doctor's instructions are followed in terms of wearing time and fit.
- The bar marks the distance between the feet, which should be aligned with the shoulders and hips and adjusted according to the infant's growth and fitting needs.
- Components D49: 2 Nuts D43, 2 guides D44, 1 bar D46, 2 heels with graduated disc D48.
- Components D47: 2 Nuts D43, 2 guides D44, 2 plates D45, 1 bar D46.

Indications
Correction of clubfoot-varus, adductus foot, coxa-anteversa, tibial rotation.

Collars

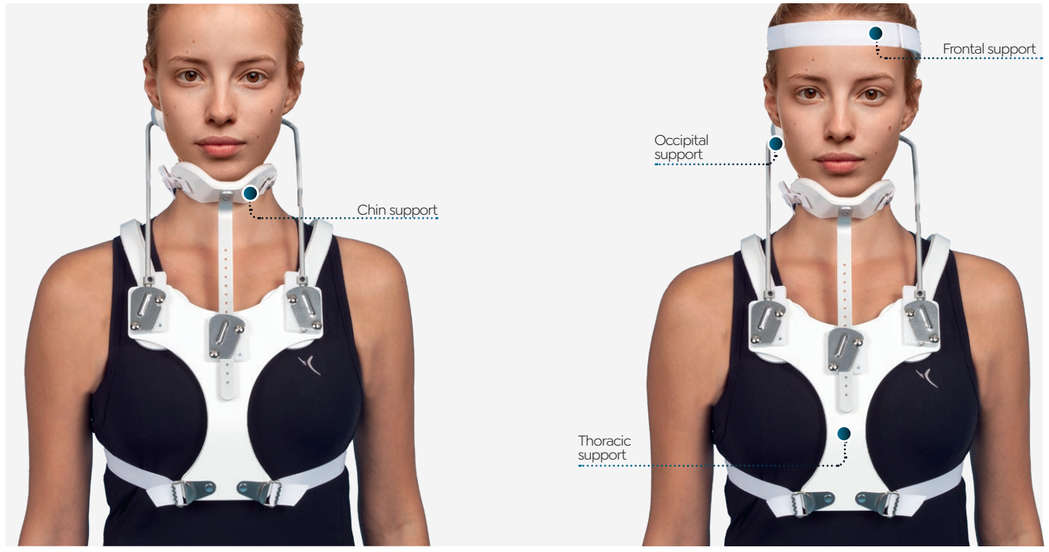
PRIM · I.M.O. SOMI COLLAR

Ref.: E45

Characteristics

- SOMI collar that keeps the cervical spine immobilised.
- It is composed of a chin support and an occipital support that are attached to a thoracic plate through two metal bars located behind the head and by an anterior support at the level of the jaw.
- All this is fixed to a central piece that rests on the thorax like a rigid vest.
- It allows the patient to lie down comfortably while maintaining immobilisation.
- The chin support and occipital support should be worn throughout the day.
- They can be easily removed and replaced by the frontal support for daily activities that require the use of the jaw, such as eating.
- Possibility of adaptation to patients undergoing traction.

Indications
Severe neck pain. Cervical root pain of comprehensive origin. Severe trauma. Postoperative. Cervical fracture. Cervical osteoarthritis. Inflammatory process that causes contracture.



CODE	SIZE	HEIGHT (cm)
616710	S	- 144

PRIM · STRAIGHT SOFT COLLAR

Ref.: CC19

Characteristics

- Collar made from foam and covered by cotton stockinette.
- Flat rear reinforcement.
- Rear Velcro fastener.

Indications
Minor trauma. Mild cervical osteoarthritis. Mild torticollis. Minor sprain. Neck pain.

CODE	SIZE	NECK CIRCUMF.(cm)	NECK HEIGHT (cm)
713201	XS	32 - 44	8

PRIM · RIGID PHILADELPHIA COLLAR

Ref.: 961

Characteristics

- Collar made of reticulated polyethylene foam of 11 mm with tracheal opening allowing ventilation and direct access to the trachea if necessary.
- Two-piece for easy fitting without the need to move the patient.
- X-ray transparent fixings.
- Also used in emergencies.

Indications
Cervical osteoarthritis. Herniated disc. Sprain. Postoperative. Neck pain and cervical root pain. Whiplash syndrome. Direct trauma to the neck. Whenever spinal immobilisation is necessary.

Hyperextension braces

PRIM · HIPEREXTENSION BRACE WITH EXTERNAL TILTED PELVIC PLATE

Ref.: C35PB

Characteristics

- Hyperextension orthosis made of anodised duraluminium.
- It keeps the spine in hyperextension, limiting anteroposterior, lateral and rotational movements.
- It adapts through the sternal, lateral and posterior plates.
- It enables continuous adjustment of the lateral plates (height), and sternal plates (width), for better adaptation to the anatomy.
- With oscillating sternal plate and axial joint, enabling adjustment of the inclination of the sternal support every 6°.
- It has an external swivelling pelvic band, with the possibility of sequential locking (at any point along its swivelling path), offering greater seating comfort and facilitating a certain degree of mobility.
- Also available in short body sizes.

Indications
Vertebral compression fracture, osteoporosis, dislocations, vertebral arthritis, vertebral infectious processes. Fracture with vertebral anterior wedging of the dorsolumbar hinge. Immobilisation in case of bone metastasis. Spondyloarthrosis.

PRIM · FUNCTIONAL HAND ORTHOSIS FOR CHILDREN

Ref.: 936

Characteristics

- Progressive passive orthosis, made from 1 mm thick mouldable steel (extremely lightweight) and covered with breathable fabric.
- The wrist strap allows the orthosis to be adjusted to the appropriate position for gradual stretching.
- Provides thumb correction adjustment.
- Can be used as a night-time splint.
- Includes spare cover.
- Right and left versions.

Indications
Neurological injury. Rheumatoid arthritis. Adherence. Carpal tunnel syndrome. Radial deviation.

PRIM · FINGER IMMOBILISER

Ref.: 940

Characteristics

- Finger splint made from mouldable aluminium.
- Immobilises the distal interphalangeal joints and stabilises the proximal joints in a functional position.
- With padded lining for enhanced comfort.
- Velcro® strap for simple and secure fitting.

Indications
Injuries to the interphalangeal distal joints. Fracture, tendon injury and postoperative immobilisation. Arthritis with involvement of the interphalangeal joints.

Mastectomy bras

Bras Guide to fitting

How to get the perfect fit

When fitting a bra, consider the three different shapes that describe a woman's profile: angular, standard and rounded. The type of profile does not depend on the cup size. For example, a woman wearing a "D" cup may have an angular profile, just as a woman wearing an "A" cup may have a rounded profile.

The following guide will help you better understand the different types of profiles:

angular

The breast tissue covers the lower cup of the bra. Often seen in more mature women with soft breast tissue. Women with an angular profile need a bra with a larger lower cup and a smaller upper cup

standard

The breast tissue is equally distributed between the upper and lower part of the breast, with a rounder appearance in the upper cup area. Women with this profile usually have firm breast tissue with a more rounded shape.

rounded

To produce a fuller appearance, women with a rounded profile need a bra that provides support in the lower cup as well as support and overage for the upper part of the breast. The rounded shape can also be wider without much projection, requiring a bra that offers suitable containment, such as the V-neck styles that both separate and support.

The descriptions of the bras on the following pages indicate or suggest the profiles they are most suitable for. Understanding the profile of both the wearer and the bra is essential for achieving a perfect, seamless, customised and pleasing fit.

Guide to measuring for a bra

Finding the right bra is essential for a woman to look and feel her best. The following guidelines on how to measure for a bra offer a suggested technique and starting point.
Taking the time to find the correct size will ensure an optimal fit. Please note that changes in body shape due to weight gain or loss may also alter the bra size. As a result, the measurements should be rechecked within six months to a year.

Bra circumference measurement

The chest circumference is measured under the bust and adjusted to the nearest multiple of 5.

Example: Measurement 76cm - EU size 75.

Cup Size

Take a half-chest measurement: from the sternum to the spine passing over the non-operated breast. Next, multiply it by 2: this is the chest circumference above the bust. If the difference in circumferences (above the bust and under the bust) is:

- from 10/12 cm the cup size is A;
+ from 20 cm the cup size is C;
between 10 y 20 cm the cup size is B.

Chest circumference under the bust 76 cm - EU size 75
Half-chest circumference over the bust is 44cm - 44 x 2 = 88cm.
88-76 = 12cm; therefore, the correct bra size is EU 75 B cup.

Bra Size

Once you know the patient's chest and cup size, look for the appropriate prosthesis size in the equivalence tables on pages 16 and 17.

Example: For an EU 75 B cup, if the prosthesis chosen is a Silk A Supreme, the appropriate prosthesis size would be no. 6.

Bra features

All **PRIM bras** have the essential features necessary for a good fit:

1. Adjustable shoulder straps
2. Elasticated trim around the neckline
3. Full cup coverage
4. High central neckline
5. Generous underarm support
6. Good separation between the cups
7. Soft, breathable pockets
8. Supportive lower chest band
9. Two or more rear adjustment levels (not shown)

Mastectomy bras

MIRABELLE QUEEN · FIRST FITTING BRA

Ref.: MIRB

Characteristics

- Super soft and firm postoperative bra available in extra-large sizes.
- Fully breathable in soft microfibre fabric.
